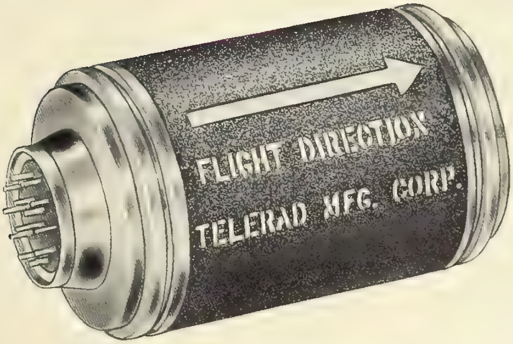
NEWS: FOR MISSILE DESIGNERS AND MANUFACTURERS

NEW ACCELERATION ACTIVATED SWITCHES FOR IN-FLIGHT MISSILE CONTROL



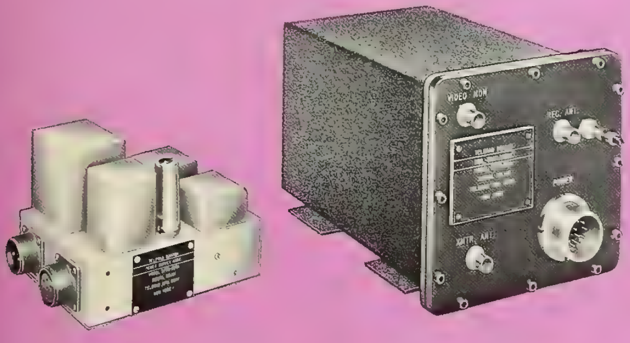
This miniature acceleration operated switch is designed for missile applications requiring positive switch functions at first motion, during, or after boost. Versatile locking arrangement permits cycling or recycling of switch during various phases of flight (requires 30 watt signal). It is conservatively rated and is designed for expendable one-time use.

The switch may be pre-set to activate at any first-motion level between 5 and 20 G's longitudinal acceleration. Average transverse accelerations can be tolerated during operation. Design permits locking or unlocking at accelerations 10 G's in excess of pre-set level. Switch functions within 50 milliseconds after reaching operational acceleration.

ADVANTAGES:

- Small size, uses standard BuOrd #18 synchro mount.
- Light weight, approximately 12 ounces (depending on model).
- Rugged, Meets military specifications for aircraft and missile use.
- Standard switch arrangements: 5 SPST make, break, or pulse. Custom arrangements available with minimum delay.
- Sealed construction permits use in explosive atmospheres.
- Standard temperature range —65°F to +250°F. Extended range to +500°F available with modified ratings.

NEW HIGH-SENSITIVITY S-BAND BEACONS



New superheterodyne S-Band Beacons for guided missile and drone-control applications. These receivers feature light weight, small size, excellent reliability, ruggedized construction.

PERFORMANCE DATA

Receiver-Transmitter

- **Over-all triggering sensitivity:** —65 DBM
- **Receiver frequency:** 2700-2900 mc
- **Receiver frequency stability:** ±2 megacycles per second
- **Image rejection:** 50 db minimum
- **Peak transmitter power output:** 100 watts minimum
- **Transmitter pulse width:** 0.75 microseconds
- **Transmitter repetition rate:** 200-1,000 pps
- **Transmitter stability:** ±2 megacycles per second
- **Transmitter frequency range:** 2850 to 2950 mc
- **Size:** 9" x 5¼" x 5"
- **Weight:** 8 lbs.

Power Supply

- **Input Voltage:** 115 volts at 400 cycles
- **Input Power:** 80 watts
- **Size:** 7" x 5" x 4¾"
- **Weight:** 5½ lbs.

A 28 volt DC supply is available on special order.

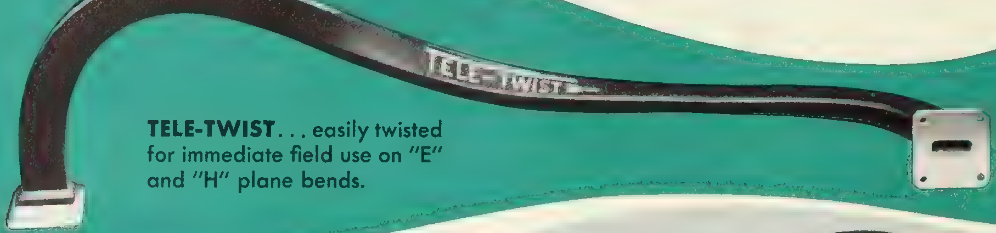
Call or write Telerad today in connection with your beacon or drone project.

ATTENTION: MICROWAVE AND RADAR ENGINEERS—

We can deliver!

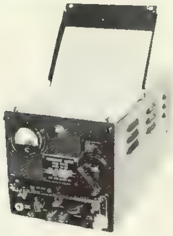
FLEXIBLE WAVEGUIDE . . . for that difficult installation.

TELE-FLEX . . . standard moulded sections for use where vibration mounts are not practical.

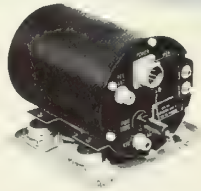


TELE-TWIST. . . easily twisted for immediate field use on "E" and "H" plane bends.

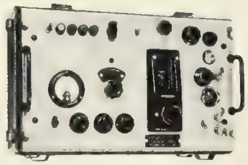
TELE-FORM . . . pre-formed where extremely tight radii must be held.



HETERODYNE FREQUENCY METER . . . accurate to .01% frequency measurement 100-10,000 mc (TFM-186).



GUIDED MISSILE BEACONS . . . high sensitivity, proven reliability available in S and L bands.



X-BAND POWER METER... frequency meter and calibrated signal generator, self-contained, immediate delivery. (TSG-147D)

For prompt price and delivery quotations on mixers, duplexers, phaseshifters, tube mounts, directional couplers, rotary-joints, wave-guide switches, hybrid-filters and complete front-end assemblies, wire or phone TELERAD.

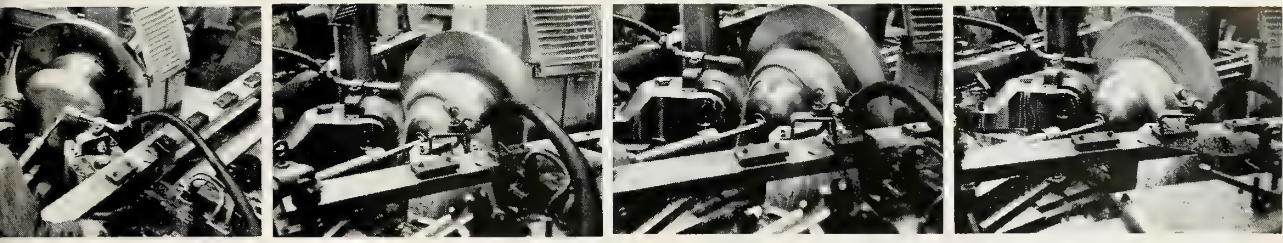
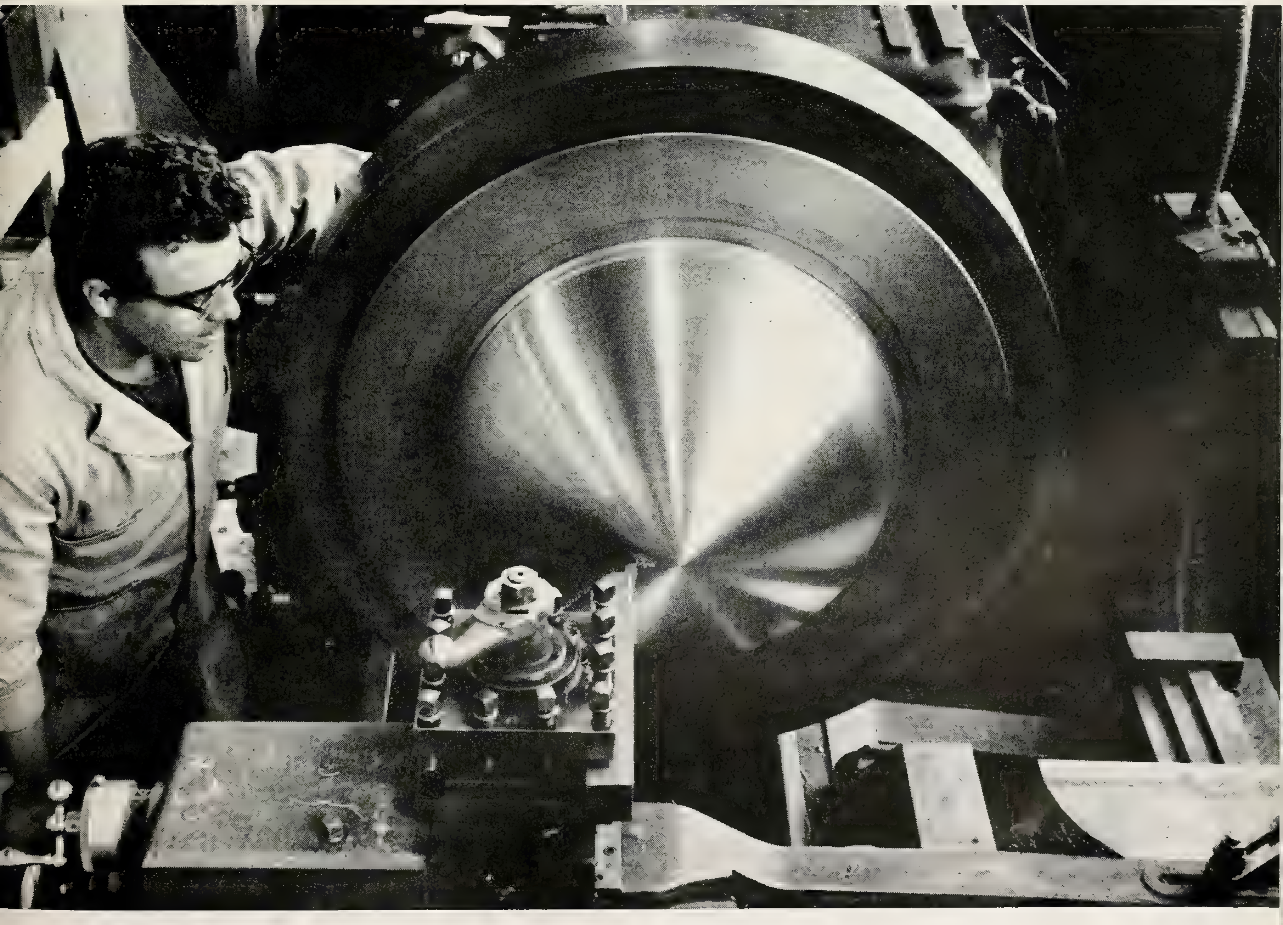
WARHEAD AND NOSE CONE

The warhead and nose cone contain the payload (nuclear, high explosive, or instruments in the case of research missiles) and the shell or cone that encases it. These are highly specialized components, representing nearly all the technologies encountered in the missile itself.





Avco and the Business End of the ICBM

Avco scientists have been feeding nose cone information into the Air Force ICBM program for the past 3 years, and have been responsible for major theoretical breakthroughs on the reentry problem.

As a prime contractor on the *Titan* ICBM, Avco has constructed prototypes of the nose cone which embody these critically important breakthroughs, and the "hardware" program based on these advances continues its steady progress.

SLIP RING ASSEMBLIES

made by EVERY known process . . .

UNITIZED ONE-PIECE CONSTRUCTION

100-Ring Missile Guidance Slip Ring
Low Torque, Low Noise.

Only Slip Ring Co. of America produces precision slip ring assemblies by every known process to meet your particular requirements — Transfer, Injection and Compression Molded, Cast, Fabricated, Vacuum Impregnated, Electro Deposited, Metal Sprayed, Printed Circuit, Mercury Pool. Sizes, .020" to 72" Dia. Circuits, 2 to 200 rings. Finishes, 2 micro inch RMS. Temperature, 650°F continuous. Vibration, 300 G's. Hi-pot, up to 15,000 volts. Longer life through wider material selection. Dielectrically superior insulating materials. Minimum noise with precious metals. Engineering consultation available.

SLIP RINGS — BRUSH ASSEMBLIES — COMMUTATORS — SEALED ASSEMBLIES

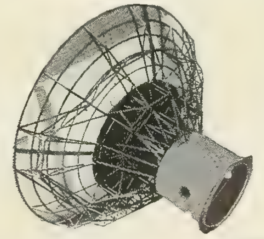
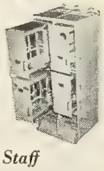
SLIP RING CO. OF AMERICA
3612 West Jefferson Blvd.
Dept. MRG, Los Angeles 16, California
Representative sales engineers in major cities throughout the United States and Canada.

ANTENNAS

Circular and rectangular parabolic antennas with reflector tolerances to meet the most rigid specifications . . . fabricated to order.



CABINETS



Precision construction to your exact specification of cabinets and consoles for electronic equipment.

Consult our Engineering Staff in pre-designing or post-designing stages of any project at No Obligation.

ALUMINUM

DEPT. RM-4 • GREENVILLE, PA. • PHONE: GREENVILLE 1600

CUSTOM EXTRUSIONS
ROLL-FORMED SHAPES
AND SECONDARY OPERATIONS

WERNER Aluminum plays a vital role in the production efficiency and sales success of such industries as: aircraft—appliances—curtain walls—electrical fixtures—furniture—railway coaches—storm doors and windows—sliding door hardware—trailers—trucks—buses—TV antenna tubing and masts.

WERNER extrusion and roll-forming services cover all alloys including the High Duty alloys, RR57, RR58 and RR257.

WERNER equipment includes heat-treating and fabricating facilities as well as other secondary operations such as punching, drilling, riveting, cutting, bending, welding. Every manufacturing phase from coil or billet to finished part can be performed in our own plant.

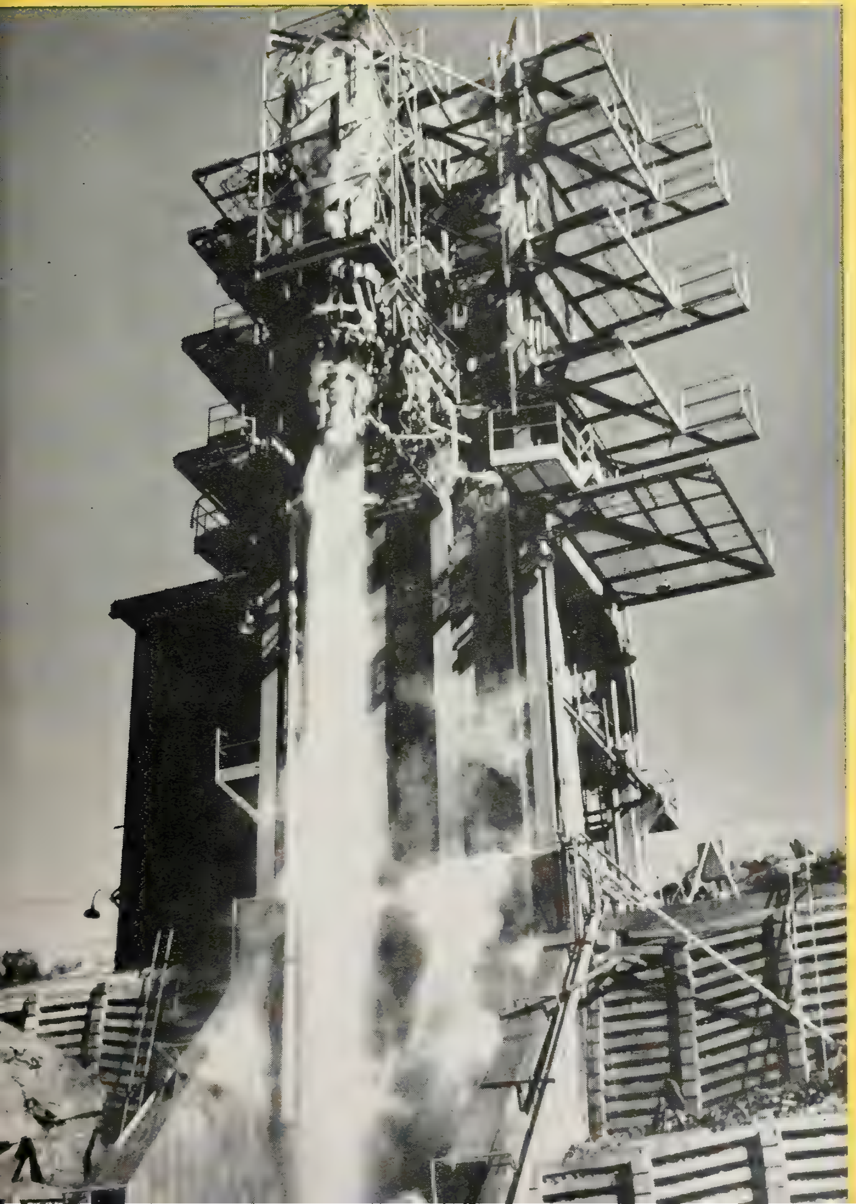
WERNER quality controls guarantee exact conformance to critical dimension requirements and design specifications.

WERNER experience, skill and versatility assure prompt delivery to meet production schedules.

Get facts and data on what aluminum can do for you. Send for this free booklet — **"New Horizons In Aluminum."**

R. D. WERNER CO. INC. ALUMINUM

PROPULSION SYSTEMS AND AUXILIARY POWER UNITS



These units include the power plant and its associated equipment; such as, tanks, pumps, blast chambers, nozzles, resonance rods and fuel. Propulsion systems are simple in solid rockets, complex in liquid rockets. Auxiliary power units consist either of hot gas turbines driving hydraulic pumps and generators, or of batteries supplying power for missile guidance and control systems.

Now! Cool through the thermal barrier with FLAMEMASTIC!

The high-heat insulating *material proved* in *actual production* for *4 years*

Now, you can provide positive protection and high-heat insulation for metal surfaces with FLAMEMASTIC. For four full years, FLAMEMASTIC has been used exclusively on one of the major production missiles. And it has been applied extensively in other experimental firings of rockets and missiles and on allied test and launching equipment.

FLAMEMASTIC protects against high-velocity combustion heats, ranging from 3000° F. upward. This insulation provides positive protection for vital electronic equipment.

FLAMEMASTIC is readily applied by conventional application methods.

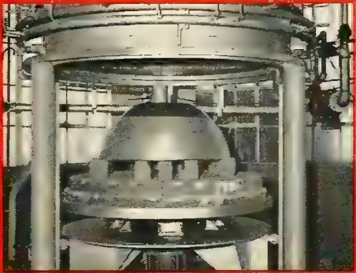
FOR COMPLETE
MISSILE CONTRACT MANUFACTURING...

Look to Lycoming

Whatever your job, Lycoming is capable of *complete* development . . . from rough sketch to final production. Lycoming's two huge plants (Stratford, Conn. and Williamsport, Pa.) utilize 6,000 modern machine tools, many incorporating EXCLUSIVE features to broaden the scope of Lycoming's capabilities.

Past performance on several missile projects proves Lycoming's versatility and high-caliber production. Facilities are available for production of complete and sub-assemblies, hardened and ground precision parts, sheet metal weldments, gears and machined parts . . . and thousands of complex items on a sub-contractual basis.

PLUS! 8000 experienced workers . . . highly skilled creative engineering teams . . . 2½ million sq. ft. of floor space . . . 6000 machine tools, completely certified for government production. COMPLETE FACILITIES FOR SHEET METAL FABRICATION, HEAT TREATING, METALLURGICAL CONTROL, INSPECTION AND TESTING!

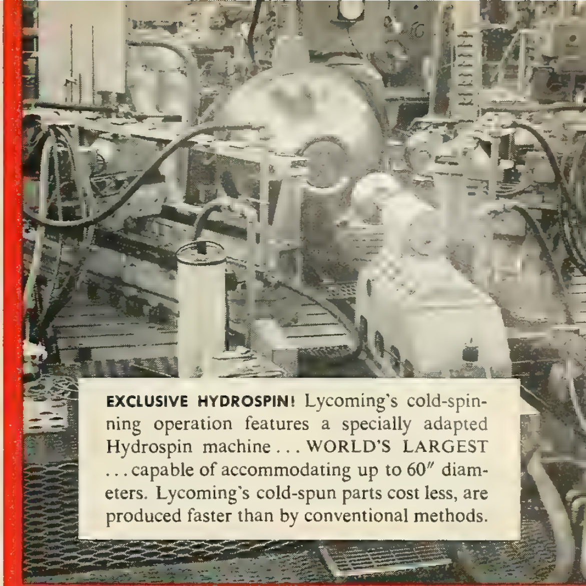


For further information on Lycoming's missile support capabilities, write to: Lycoming, Avco, Stratford, Conn.

1908-1958
FIFTY YEARS
OF POWER

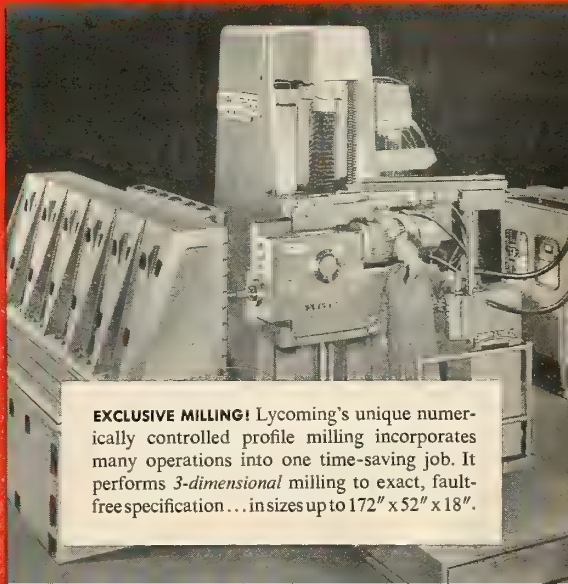
Lycoming

A Division of Avco Manufacturing Corporation | Stratford, Conn., Williamsport, Pa.



EXCLUSIVE HYDROSPIN! Lycoming's cold-spinning operation features a specially adapted Hydrospin machine . . . WORLD'S LARGEST . . . capable of accommodating up to 60″ diameters. Lycoming's cold-spun parts cost less, are produced faster than by conventional methods.

EXCLUSIVE WELDING! Designed and built for Lycoming, flashbutt welding machines feature 'hot-trimming,' another Lycoming exclusive. Complete range of manual and automatic welding procedures available . . . heliarc, spot gun, inert gas, arc, and many more.



EXCLUSIVE MILLING! Lycoming's unique numerically controlled profile milling incorporates many operations into one time-saving job. It performs *3-dimensional* milling to exact, fault-free specification . . . in sizes up to 172″ x 52″ x 18″.

HIGH STRENGTH FASTENERS

Hex head cap screws—low carbon, high carbon, stainless 304 or 316 in stock

Specials made to order in any alloy

Hardened and ground components to aircraft standards

31 years of aircraft engine experience and quality

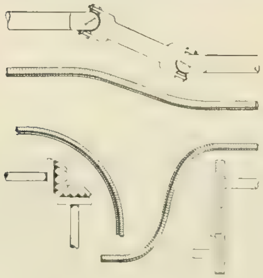
FLEXIBLE SHAFTING REDUCES GEARING



Flexible Shafting reduces the noisy and cumbrous gearing used in conjunction with solid shafts. It has the ability to transfer power from remote places, over, under, and around obstacles found in the path of installation between the drive and the driven units. Flexible Shafting requires very few parts, making them inexpensive; whereas solid shafts using universal joints, miter gears, and gear trains, many times would not be feasible because of their noisiness or lack of economy. With a Flexible Shaft assembly, design may be simplified and your engineering time spent on other necessary component parts without having to worry that they will create obstacles when placed where you want them.

Flexible Shafting cuts down on vibration thus offering long life with very little maintenance required. For complete Flexible Shaft information, write F. W. Stewart Corporation, 4311 Ravenswood Ave., Chicago 13, Illinois.

New... Valcor
ALL-WELDED
V-28100
Series
Features
Reliability
VALCOR
SOLENOID VALVE

...the only all-metal, in-line solenoid valve with an optically-flat seat!

The all-new Valcor V-28100 Solenoid Valve eliminates all internal or external non-metal seals. All-welded, all-metal, the V-28100 is designed to minimize temperature and media problems for the long life of the valve. The V-28100 features an optically-flat, hard-faced seating, one of the many unusual engineering designs responsible for Valcor's wide acceptance throughout industry. And because of its all-metal construction, the shelf life of the V-28100 is unlimited.

Featuring compact size and low weight, it is especially valuable in missile and aircraft design.

Write for complete technical data and literature today.

VALCOR
SOLENOID VALVES

The new V-28100 series cover the following range—

MEDIA: Fuels, hydraulics, pneumatics, liquid gases
TEMPERATURE RANGE: -300°F to +600°F
DIMENSIONS: 1.25" x 2.60"
RESPONSE: 15 milliseconds
VOLTAGE: 18-30 volts DC
PRESSURE RANGE: 0 to 3,000 psi
FLOW EQUIVALENT: .020 to .125 sharp edge orifice

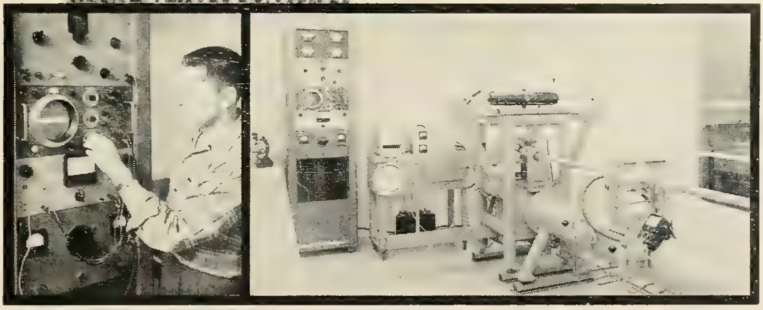
Thee sword must
withstand a solid blow
on a smith's anville
by a stout man...*

*From Armourer's specifications, 1450.

Product testing is just as important to Advance Gear as it was to the swordsmith of old...

But our testing methods are vastly changed . . . Advance Gear's new testing laboratory has no equal in equipment or scope of testing technique, another reason you can expect perfection from Advance Gear.



A section of Advance Gear's testing laboratory. Gear systems for the Bomarc missile are tested here before delivery to Boeing.

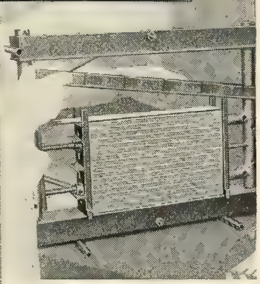
UAP offers immediate, economical production service for

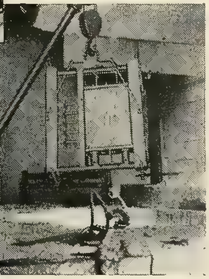
ALUMINUM DIP·BRAZED ASSEMBLIES

UAP worker assembles multiple parts in fixture for heat exchanger core. Gloves guard against contamination of aluminum prior to brazing.



Fixturing is complete. Assembly proceeds rapidly since bonding of parts is achieved in a single dip-brazing operation.

Pre-heat furnace assures 100% heat penetration of fixtured assembly prior to immersion in flux bath.



Fixtured assembly is lowered into flux pot. Molten brazing flux forms fillets for perfect bonding of parts.

Multiple baths remove all residual flux after brazing.

Now . . . UAP can help solve your design and production problems involved in making compact, high-strength, pressure-tight aluminum assemblies from multiple pieces. UAP's modern facilities are immediately available for fast, economical dip-brazing on a medium or high production schedule basis. UAP dip-brazing produces lightweight, ribbon-thin, non-porous joints . . . stronger than the parent metal . . . uniform in pressure tightness and appearance. Your product will benefit from UAP's many years of experience in supplying quality dip-brazed aluminum assemblies for industrial and military applications.

Adaptable to most aluminum materials

This fast, flexible joining process is suited to compatible aluminum sheet, forgings and castings.

Simple or complex assemblies

Dip-brazing is based on flux-bath immersion, so accessibility to internal joints is never a problem. Assembly can include hundreds of complex parts.

Small or large assemblies

Pre-heat furnaces are as large as 36" square by 48" high. Fixtured assemblies and sub-assemblies within these dimensions can be dip-brazed.

man or missile
into space...
oxygen or propellant
regulation...

Firewel

assures "FULL COUNT DOWN"

The experience and engineering talents of *Firewel* developed in the oxygen regulation field are now meeting the needs of "new frontiers" of space exploration. The abilities to produce miniaturized, lighter weight, intricate controls and systems for oxygen are now being supplemented by the need for missile hardware of the same highly technical nature.

Precision miniature pressure regulators, reducers, switches, or control systems produced by *Firewel* have protected pilots in practically every manned aircraft record flight since 1952 ... when the Bell Aircraft X-1 broke the sound barrier. As man goes faster, farther and higher, *Firewel* keeps pace with his new environmental and pressurization needs.

Expert technicians and Sales-Engineers are available at a moment's notice to "fly to you," the customer, to aid in the solution of technical problems in this "new frontier" of aviation. Write or wire.

Engineers are needed at Firewel.
Address application to Personnel Manager Now.

Unusual forging solves Falcon design problem!

MISSILE BY HUGHES AIRCRAFT

Upset Forging by Commercial Shearing!

The JATO nozzle for the Hughes Falcon air-to-air guided missile presented some difficult metal forming problems.

Hogging it out of a cylindrical blank would involve considerable machining time and wasted material. Commercial engineers working with Hughes during the developmental stages of this missile produced an upset forging with a through-pierced hole of varying diameters involving tapers at both ends. The internal displacement method refines the grain and eliminates hidden flaws in the metal, assuring greater strength of the finished part.

Tough, unusual and tricky metal forming problems are routine at Commercial, where experience is combined with facilities for metal forming—by Upset Forging, Heavy Stamping or Rotoforming.

Commercial engineers have the experience and freedom to recommend the best method of meeting your problem—for short run or quantity production. They welcome the challenge of your missile production problem. Just send a sample blueprint or sketch of your problem part to The Commercial Shearing and Stamping Company, Dept. X-14, Youngstown 1, Ohio.

MISSILE
METAL
MAGIC

With the largest power spinning machines in the country — capable of spinning 5/8" thick steel up to 7' in diameter — combined with its experience in the missile field*, C. W. Torngren Company is performing missile metal magic!

Torngren's unique, hydraulic, semi-automatic MECATORN process is especially applicable to experimental and prototype designs, affording huge savings in tool and piece cost.

Typical of the parts spun at low unit cost by the MECATORN process are: venturi nozzles, nose-carrying containers, after bodies, bulkheads, lox and acid tanks and heads, shrouds, bellmouths, ducts, etc.

*Advance work on ATLAS and TITAN, as well as work for leading research institutes, universities and defense agencies.

AiResearch is the largest designer and manufacturer of pneumatic controls for the aircraft and associated industries. During the past 10 years more than 300,000 units have been produced and are in service.

Temperatures of the fluids (including gas and liquids) range from −400°F to +2000°F at pressures to +6000 psig. The units operate at any ambient pressure at ambient temperatures from −300°F to over +1000°F. Line diameters range from ⅛ inch to 15 inches.

This equipment is developed and tested in the finest pneumatic facilities in the world. Your inquiries are invited.

MISSILE COMPONENTS by LAVELLE

Missile designs demand quality and reliability in components to deliver the peak performance essential for the successful completion of their mission. Lavelle's proven experience in the fabrication of missile, jet engine, airframe and electronic components can meet your most exacting standards.

Skilled personnel together with modern facilities enable Lavelle to produce sheet metal weldments or assemblies of stainless steel, titanium, aluminum, or heat resistant high strength nickel alloys . . . by resistance, automatic or manual inert gas, metallic arc, or oxy-acetylene welding.

Major manufacturers look to Lavelle for quality workmanship and dependable delivery at reasonable cost. If your design specifications demand the finest in fabricating services . . . contact Lavelle.

Write for illustrated brochure describing Lavelle's services in detail.

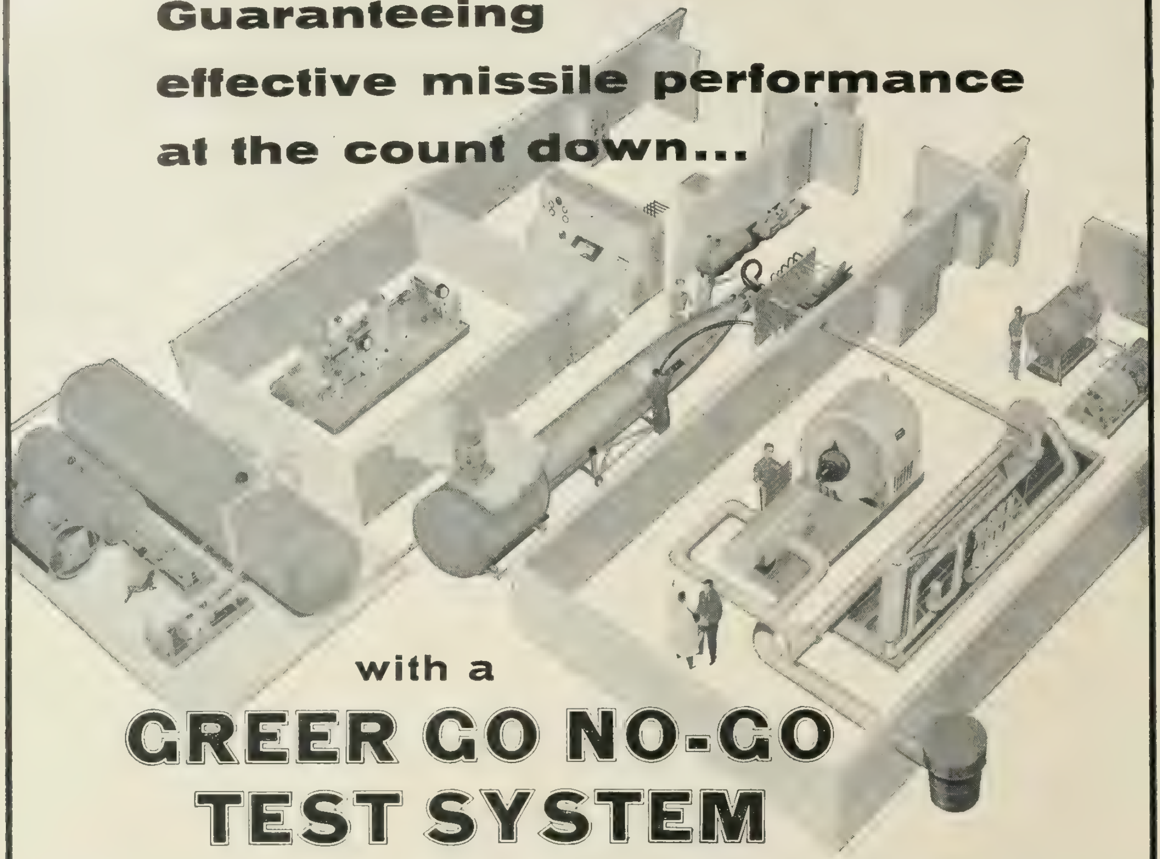
Guaranteeing effective missile performance at the count down...



with a

GREER GO NO-GO TEST SYSTEM

Missile readiness at the launching site is assured when put through its paces with a Greer Go No-Go Test System. Take for example the above missile test facility recently completed for a leading manufacturer of missiles.*

This unique Go No-Go System automatically and accurately tests missiles off the production line. The system encompasses every type of missile test including fuel, pneumatic, hydraulic, electrical, mechanical—all equipment designed, developed and built right in the Greer plant.

The fool-proof test system programs and schedules 32 different inputs for Go No-Go readout, and self-checks each input for accuracy before the actual test. Its special and multiple circuits provide rapid determination and isolation of defective parts in the missile. In addition, the equipment signals accurate operation of its own test circuits and components. All test conditions, altitude, speed, pressure, temperature, etc., are simulated and accurately controlled to match those in actual missile flight.

Bring your out-of-ordinary missile test problems to Greer. At your disposal is Greer's vast test equipment experience and know-how, Greer's staff of creative engineers and skilled technicians—plus a fully-equipped plant to do the job for on-time delivery. For immediate action contact Greer.

**For details, contact Greer sales manager, test equipment division.*

GREER GROUND SUPPORT EQUIPMENT

MISSILE GO NO-GO SYSTEMS

MISSILE LAUNCHING SYSTEMS

MISSILE GAS BOOSTER SYSTEMS

GREER HYDRAULICS, INC. • NEW YORK INTERNATIONAL AIRPORT • JAMAICA 30, NEW YORK

GROUND SUPPORT EQUIPMENT

This is the equipment that supports the missiles; such as, "go, no-go" boxes and other electronic checkout gear, liquid oxygen generators, fuel trucks, fire trucks, portable generators, launching pads and block-houses.

Announcing a specialized

MISSILE SUPPORT SERVICE

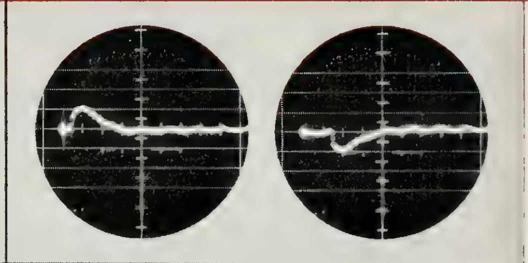
You worry about the missile . . . let Packard Bell Electronics take care of ground support! Proven performance in this field has resulted in a separate missile equipment section devoted exclusively to ground test and launching equipment. Here, in a 21,500 sq. ft. facility geared for short run production, experienced management shoulders complete responsibility. Here the most radical design changes are absorbed during the process of development. Here direct assembly supervision by production engineers eliminates costly and time-consuming delays. A reliable source, any way you look at it. And a reliable way to rid yourself of a major headache!

ENGINEERING BEYOND THE EXPECTED

DESIGN—When time dictates, available equipment can be adapted to your specifications. But you receive custom design, *beyond the expected*, when you need it. For example, the transistorized MAGAMP power supply (right). This unit provides a faster response time . . . a lower overshoot and undershoot . . . and remote regulation at longer distances than has ever been achieved before with this type of power supply.

DELIVERY—A contract from Douglas Aircraft for "Thor" test equipment was awarded in March 1956. A total of 100 units, comprising 30 different units, was delivered before deadline in November. On-time delivery at its best . . . delivery *beyond the expected*.

This transistorized MAGAMP power supply delivers a 27V to 42V output at 0 to 300 amperes, *regulated at a load up to several hundred feet away*.



The MAGAMP has a surge capacity of 400% overload for 2 seconds. Regulation at the load is 1% or better. Recovery time is less than 50 milliseconds. Overshoot and undershoot are less than 25%, with a 30% change in load. (Scale in above photos: 5V/CM and 10MS/CM.)

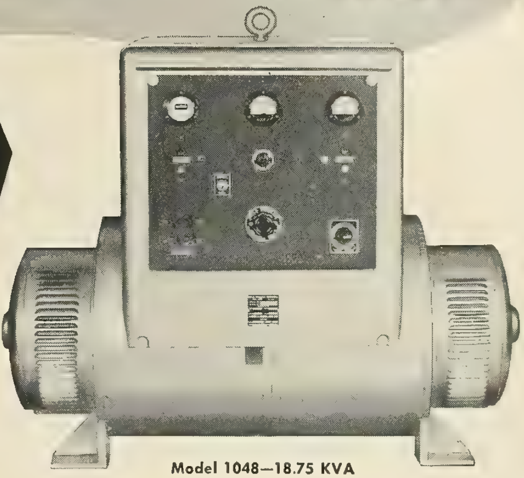
GET EXACTLY 400 CYCLES PER SECOND WITH HOBART SYNCHRONOUS MOTOR GENERATORS



Model 1048—18.75 KVA

FEATURES:

- Simplified Design
- Rugged Construction
- Dependable Performance
- Ease of Installation and Maintenance

USES:

- Aircraft Test Checkouts
- Flight Control Stations
- Communication and Navigation Systems
- Instrument and Maintenance Workshops

HOBART

. . . Foremost in Ground Support Power Supplies—Whether d.c. or a.c.!
Impressive in power and performance, Hobart Ground Power Support Units (d.c.) are known throughout the world as the chosen ground power unit in the commercial aviation field.

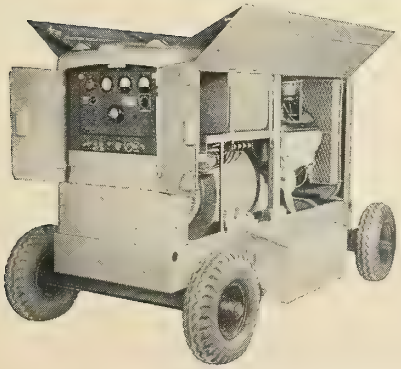
With the advent of jet aircraft, the merits of an a.c. electrical system is unquestionably the right choice, so the need for 400 cycle power is urgent. Research by Hobart indicates that units ranging from 3.75 KVA to 125 KVA are required. Design, development, and production of these new units are in progress at M.G.C. The Hobart d.c. line will, of course, take care of the limited supply of low voltage d.c. requirements on certain jet aircraft.

LOOK TO HOBART FOR . . .

- Induction motor-driven generators—direct drive
- Induction or synchronous motor-driven generators—belt drive
- Induction MotoDrive generators (380 to 420 cycles)—vari-speed drive
- Synchronous motor-driven generators—direct drive
- Engine-driven generators, self-propelled—gasoline or Diesel
- Trailer-mounted engine generators—gasoline or Diesel
- Truck-mounted engine generators—gasoline or Diesel

Checked to your specifications . . . Shipped to your schedules!

Model 3008-P
37.5 KVA



REGARDLESS OF COST . . .

you can't get a better frequency changer than Hobart because of these outstanding features:

- Complete instrumentation
- Magnetic type load contactor
- Voltage regulation is by a magnetic amplifier
- Overload relay opens the main contactor on overloads
- Over-voltage relay protects the aircraft in case of excessive voltage
- Transient voltage, output voltage modulation, response time, and wave shape are held to the closest possible limits

TO OPEN THE WAY TO FASTER FLIGHT SCHEDULES, SMALLER FLEET REQUIREMENTS AND INCREASED PROFITS—WRITE FOR COMPLETE INFORMATION INCLUDING DESCRIPTIVE LITERATURE DETAILING CONSTRUCTION, RATINGS, TYPES, SIZES, AND SERVICE CHARACTERISTICS.

specify fast, accurate, hydraulic "packaged" drives by VICKERS®

Faster motion — the fastest acceleration, deceleration and reversal of any power transmission.

Instantaneous power — in less than 30 milliseconds the pump end can be stroked from zero to maximum displacement.

Stepless speed adjustment — a wide range of speed adjustments to meet the most exacting design requirements.

Ultra fine control — missile launchers have been elevated and trained with exceptional accuracies down to speeds approaching zero.

High power gain — low milliwatt signal easily controls hundreds of horsepower.

Narrow deadband — narrower than any other high horsepower drive.

Compact — more power per unit of bulk or weight. Pump and motor can be mounted over and under, side by side, in line or with shafts at any angle.

★

Save time! See Vickers *first!* At Vickers you get the benefit of the most comprehensive line of hydraulic components and power packages — an extensive staff of experienced hydraulic engineers — fifty years of experience with hydraulics for ordnance needs.

Write for Vickers CIRCUITOOL, a handy plastic template and manual that speeds the drawing of hydraulic circuits by using JIC symbols. Sent only when requested on company letterhead.

VICKERS
CIRCUITOOL

Phone, wire or write for detailed information or a visit by one of our application engineers.....

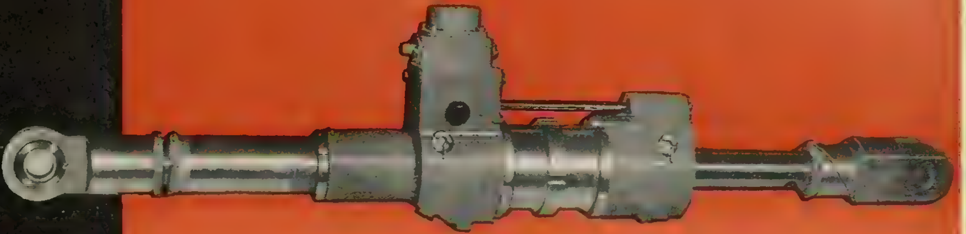
new Electrol HYDRAULIC ACTUATORS for missile applications



The Electrol Model SK-684 cushion-type hydraulic actuator was designed primarily to control the flight path of America's great, new missiles. It conforms to MIL-C-5503 and MIL-H-5440 and contains a built-in potentiometer which generates a feed-back signal for the amplifier, serving to identify piston position and complete the electrical servo loop. Potentiometer and piston move in unison. Design modifications permit variations in both power output and control methods.

deliver a power output of many tons

Specifications for a Typical Electrol Missile Actuator — Model SK-684

Type	Hydraulic; double acting, cushioned at both ends.
Operating pressure	3,000 p.s.i.
Power output	9,430 lbs.
Ambient temperature range	—65° to +275° f.
Cylinder bore	2.25″
Cylinder rod	1.25″
Cylinder stroke	6.25″
Length (overall)	31.37″
Diameter	3.25″
Mounting	Clevis type
Weight	23 lbs.

Better Designed Products Use Electrol Hydraulics and Pneumatics

"The reason birds can fly . . . is simply that they have perfect faith, for to have faith is to have wings."
. . . Sir James Matthew Barrie

When science began, man's faith in his own judgment often preceded the established fact. Today, however, with aerodynamics and other sciences *faith is based on fact.*

Cornelius products are among the thousands of individual components selected for use on a very advanced design aircraft being readied for its first flight. The planners, designers, engineers and analysts responsible for this aircraft have great faith, because of experience, in each individual component which will be used.

The Cornelius Company has been awarded prime responsibility for the pneumatic and gaseous nitrogen systems of this aircraft. *As a result of this responsibility Cornelius has perfected the FIRST 275° F. pneumatic system for U. S. aircraft.* In this "system of the future" are 13 Cornelius components, including a new 3000 psi, 8 cfm, hydraulic motor driven compressor.

Faith is not an idle word at The Cornelius Company. It has two important meanings. First, it represents a trust customers have placed in us, and secondly, it is an expression of our confidence in ourselves. For assistance with any pneumatic, gaseous or hydraulic problem, concerning missiles or aircraft, write or call a Cornelius Sales Engineer today.

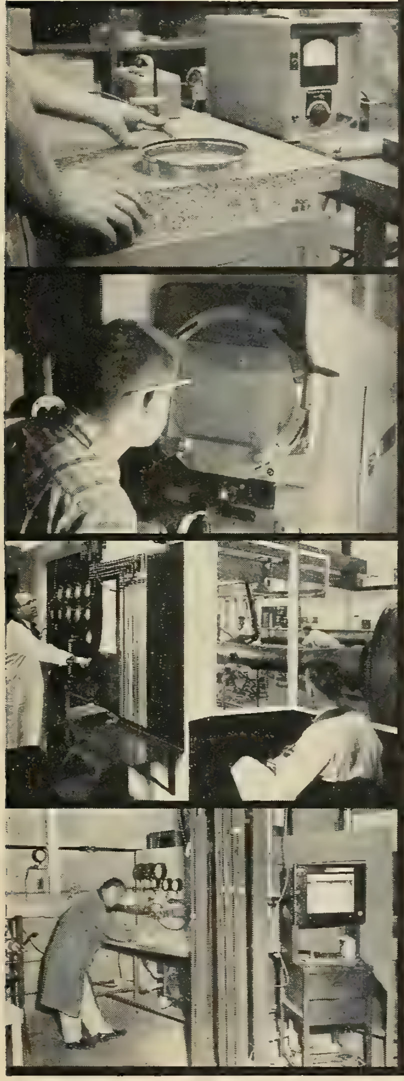
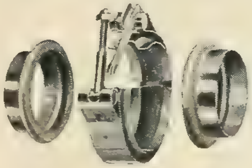
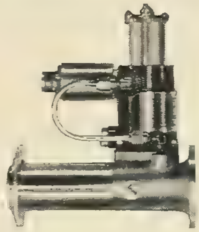
proved reliable





duct couplings/duct supports

Couplings provide metal-to-metal seal, fast disconnects, for high pressure, high temperature air ducts. Standard diameters 1″ to 7″, specials to 36″. Separate or integral duct supports. Many materials.



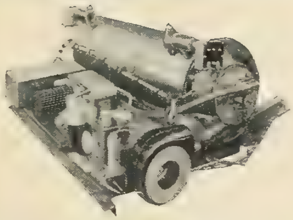
pneumatic controls

Multi-function weight-saving air valves and regulators manufactured to missile tolerances. Adequate staff for fast design and production changes.

Platular* heat exchangers

Combine efficiency of plates with strength of tubes into new economical modular design. Can fit into cramped, odd-shaped spaces in missiles and high performance aircraft for great variety of applications.

**Trademark of Surface Combustion Corporation.*



ground support liquid heaters

Standard units for vehicle, space, and fuel transfer applications. Available in capacities from 90,000 to 1,000,000 Btu/hour and can be combined easily for greater output. Now in service in a wide range of ground support equipment.

Janitrol development and test facilities provide proof in advance of reliable performance in service.

Contact your Janitrol representatives when you need components or systems for heat transfer or air control. Janitrol Aircraft Division, Surface Combustion Corporation, Columbus 16, Ohio.

Powered by
WHITE'S Superior Diesels

Down-Range Stations will Track U.S. Guided Missiles

Along a 4,400 mile testing corridor sweeping from Florida southeastward to Britain's Ascension Island, U.S. guided missiles burn their way through tropical Atlantic skies. Soon new radar eyes will be following their flight from atop tiny rocky islands located hundreds of miles from any power station. The U.S.-built tracking and control stations will fill gaps along the missile path . . .. will be watching, recording, and ready to explode the missile in air should its behavior become erratic!

Because the guided missile program is vital to U.S. defenses—yet must be conducted with full protection to lives and property—dependability of every piece of tracking equipment is doubly essential. Dependable White's Superior Diesel engines meet the U.S. Air Force requirements for supplying power on this down-range project. These high-quality, heavy-duty engines are world renowned for their continuous, dependable operation and easy starting. Superior's precision construction provides long, trouble-free performance with low maintenance and utmost fuel economy.

Portions of other strategic U.S. defense systems, like the "Texas Towers" (Early Warning Radar Stations), the "DEW" line (Distant Early Warning), and the "SAGE" project (Semi-Automatic Ground Environment), will also rely on Superior engines—proof again of their rugged dependability. If your requirements range from 215 to 2150 horsepower, or 150 to 1500 KW, benefit from White's many advanced Superior design features! *Get complete information now!*

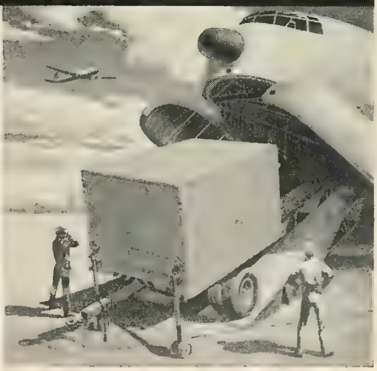
CRAIG HELICOP-HUTS — Lightweight all-weather 'flying" shelters. Available in a family of sizes.

OBSERVATION-DOMED SHELTER with 4-wheel dolly for air traffic control and other operation.



TRAILER VAN LM-105 — Transportable by C-119 or larger cargo aircraft.

SYSTEMS MOBILITY

Now you can make any system air-transportable in lightweight, rugged, insulated Craig shelters and vans. Any system — from missilry, meteorology, communications, navigation, maintenance, surveillance to air traffic control.

Craig builds to Military Specifications — meets your requirements exactly. And you can leave installation problems to us. All "packaged" systems are ready to operate when they leave our plant.

Write us your requirements today.

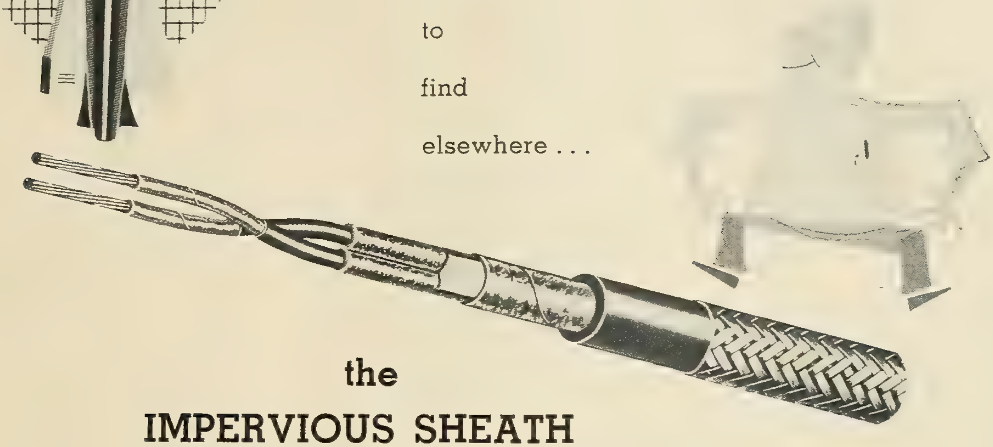
how
hard
to
find
elsewhere . . .

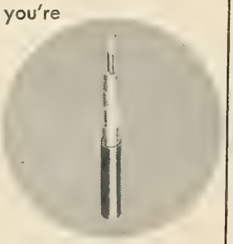


the IMPERVIOUS SHEATH AND SHIELDED CABLES

to get your vital project
off the ground are ready for
IMMEDIATE DELIVERY AT **NORMANDY**

Whatever your electric wire or cable requirements, you're always on schedule, always "in orbit" with Normandy . . . serving many of America's leading rocket and missile projects with one of the

WORLD'S LARGEST INVENTORIES OF GOVERNMENT SOURCE INSPECTED STOCK—ALL UNDER ONE ROOF!



HEAT & FLAME RESISTANT CONTROL CABLES . . . DBSP-TBSP-FBSP-MSS-MCOS-MMOP SHFS-TTRS-TTRSA. Furnished with Inspection Forms.

AIRCRAFT-TRAINED
MISSILE-MINDED

31 years experience in aircraft engine parts

Headed fasteners in heat-resistant metals

Laboratory-controlled hardened and ground precision parts

Assemblies and sub-assemblies

HMS
HARTFORD MACHINE SCREW CO.
Division of Standard Screw Co.
HARTFORD 2, CONNECTICUT

Mr. Sub-Contractor:
BEWARE
a decline in
RELIABILITY
due to these shipping hazards:
☐ Vibration
☐ Shock
☐ Moisture
☐ Corrosion
☐ Dust, Dirt
☐ Abrasion
☐ Handling
☐ Electrolytic Action

Eckol Engineers "custom design" trouble-free, heavy duty shipping containers that *really* PROTECT! Call for consultation. No obligation.

ground support and test equipment

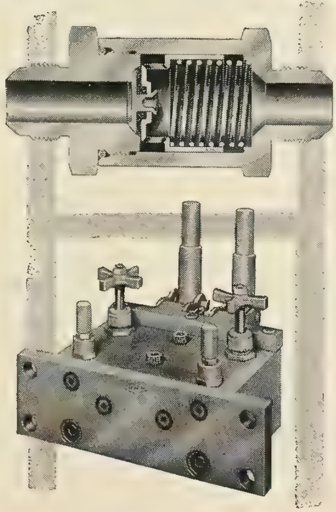
RELIEF VALVES
Quick unloading, smooth operation. Guided shut-off piston with stainless steel or Nylon seat. Pressure range to 4000 psi. Brass, aluminum alloy, or stainless steel. ⅛″ to ¾″ pipe or tube. Temp. range to 400°F.

HAND PUMP
For hydraulic applications on missile carrier and support equipment. Double-acting. 2 cu. in. displacement per cycle. 1000 psi. working pressure. Aluminum alloy body, stainless steel trim. -65° to 160°F.

LEVELATOR VALVE
For automatically maintaining height and level condition in any vehicle with air spring suspension. Controls swaying in transit, and off-level position while standing. Applicable to trucks, buses, trailers, carriers, cranes, etc.

LO-TORQ SELECTOR VALVES
Smooth, easy operation, with low turning torque because of pressure balancing design. 0 to 6000 psi. Bronze, steel, or aluminum alloy. ⅛″ to 2″ pipe or tube. 2, 3, 4 ports.

REPUBLIC VALVES



FREE-FLOW CHECK VALVES
No leakage. 3000 psi. Very low pressure drop. Can be furnished to open at ¼ to 35 psi. Brass, stainless steel, or aluminum alloy. ⅛″ to 2″ pipe or tube. Temp. range -65° to 200°F.

DUAL HAND PUMP
Consists of 2 pumps, 2 relief valves, and 2 needle shut-off valves, compactly manifolded for elevating mechanisms, hydraulic applications on ground support equipment, etc. Aluminum alloy body, stainless steel trim. -65° to 160°F.

MINIATURE CHECK AND RELIEF VALVES
Ask for Bulletin 158

SPIN THAT CONE!

PHOENIX
Spin-Fab
PROCESS

The fast, low-cost way to produce spherical shapes accurately.

World's Largest Spinning Lathe at Phoenix Products Co.

Nose and aft sections, Phoenix fabricated

Gas Turbine Parts
Stainless Steel and Aluminum

Diameters up to 15 feet can be spun by PHOENIX . . . from any metal that can be worked . . . in thicknesses up to ¾" aluminum.

Difficult shapes a specialty. Complete fabrication including deep-drawing and assembly also available in large modern plant with finest facilities in the industry.

Our engineers have long experience in manufacturing of components for missile, rocket and aviation development and production.

New "Phoenix Spinning Manual" just off the press. Copies and other research data on request. Write

Looking for solutions?

AMF has missile experience you can use

• Building a reliable missile system introduces problems at every step . . . the kind AMF solves daily. From drawing board to target, AMF is constantly bridging the gap between missile concept and performance. • This wealth of experience, gained as a leading contributor to numerous major missile programs, can produce the solution to your particular problem. • For a full description of AMF engineering and production facilities in the missile field, as well as a review of their performance, contact the AMF Defense Products Manager in any of the cities listed below.

air circuitry—an advanced concept

for safe control of ground handling equipment

Air circuitry is a missile-age idea. It has emerged from Westinghouse Air Brake's 90 years' experience in pneumatic control. Air circuitry provides *safe* control: air, an inert control medium, can't burn. Air circuitry provides *reliable* control: air is available in limitless supply. Air circuitry provides *economical* control: pneumatic devices are not expensive.

Pneumatic systems can be applied to all ground support functions, ranging from the automatic handling of missiles to the instantaneous operation of blast doors. Let us show you how air circuitry —with pressures from 0 to 3000 psi—can improve the operation of your ground support equipment. Contact our nearest sales office: *Washington • New York • Jacksonville • Pittsburgh • Detroit Chicago • Milwaukee • Dallas • Houston • Los Angeles • San Francisco*

HUNTER SPACE HEATERS

for mobile and portable military shelters

- designed and produced in accordance with military specifications for space, equipment and personnel heating requirements.
- 5 basic models — each custom-engineered for a wide variety of applications — for ground control and maintenance equipment in missile systems, radar, microwave and radio communication systems, etc.
- BTU/Hour range: from 15,000 to 60,000.
- multi-fuel-burning models; also models which burn any type gasoline.
- all models air-circulating, thermostatically controlled, all designed for cold starts as low as — 65°F.

Other Hunter equipment for military applications: engine heaters; unpowered, instant lighting torches; refrigeration units.

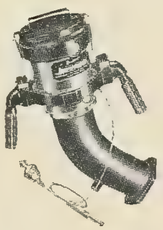
Buckeye

KEEPS THE PRESSURE ON

FUEL SERVICING

ADAPTERS

- Tapered seat, self-centering, cannot cock. Internal contour provides *maximum flow with minimum pressure loss.*
- Provide the most efficient form of connection for single point fueling.
- Type A-5, with one of several variable housings shown. Types A-2, A-3, A-4, and A-6 also available.
- All adapters meet General Specification MIL-A-6425A.



COUPLING VALVES

- Self-sealing coupling valves mate with adapters shown above to make positive leakproof connection for transfer of fuel. Full flow, minimum pressure drop.
- Valve can be connected or disconnected under pressure without loss of fuel.
- Type D-1, illustrated, meets Specification MIL-N-5877A.
- Other styles available.

BUCKEYE IRON & BRASS WORKS
DEPT. MR, BOX 883, DAYTON 1, OHIO

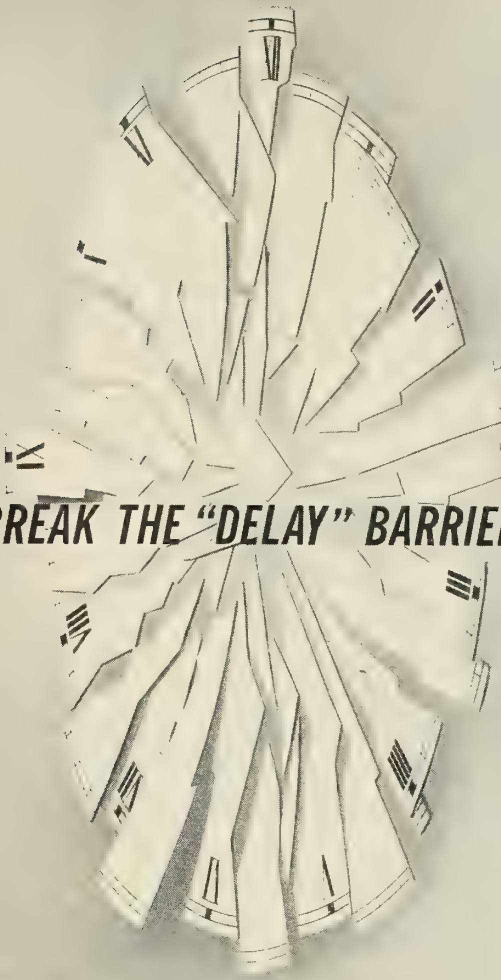
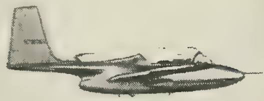
GRANT SLIDES BREAK THE "DELAY" BARRIER!





- by reducing servicing time
- by affording immediate accessibility to internal operating parts
- by extending chassis units to best maintenance positions

Grant Industrial Slides offer a new concept in the high-speed servicing of today's high-speed aircraft. They break the "delay" barrier by eliminating the time consuming effort of "getting at" defective parts, enabling almost instantaneous maintenance without costly loss in operating time.

Grant slides are strong and dependable. They frequently weigh less than cumbersome brackets or mountings, and are available in an unlimited range of variables. Grant offers complete engineering services, including at-your-plant discussions regarding the development of slides that meet your specifications exactly. Write today for Grant Industrial Slides technical data.

DRENCHED *for Safety!*

HAWS
EMERGENCY SHOWER
& EYEWASH FOUNTAIN

HAWS
EMERGENCY
FACILITIES

This safety station is part of the comprehensive safety program maintained by the General Electric Company at its Appliance Park, Louisville, Kentucky. General Electric considers its safety record a prime achievement, and provides HAWS Emergency Facilities at critical locations throughout the production areas.

• Drench Showers • Eye-Face Wash Fountains

Not just a shower . . . a HAWS DRENCH SHOWER! A quick pull of the chain releases a solid sheet of water to rid body and clothing of dangerous chemicals and caustics. Safety in seconds—saving vital moments until medical aid arrives, perhaps avoiding serious injury. HAWS Eye-Wash Fountain, too, is ready to flood eyes from specially designed fountain heads. These are only two items from HAWS complete line of emergency facilities to meet every industrial need. Safety authorities stress the necessity of instant irrigation for eye or body contamination. Provide for it with HAWS equipment. Get the full facts now, by writing . . .

LIQUID OXYGEN AND NITROGEN TRANSPORT UNITS

Hofman 3000 Gallon Trailer

Built to A.S.M.E. and I.C.C. specifications in sizes from 500 to 3500 gallons. Efficient performance is shown in this Hofman powder in vacuum insulated equipment. Standard features include: bottom fill and discharge line, top fill line, liquid level gauge, vacuum valve and filter, thermocouple vacuum gauge, pressure gauge, A.S.M.E. code stamped inner vessels, quick pressure build-up system, extended stem valves on liquid lines, ending with Hofman quick couplings.

HUDSON'S NEW
MISSILE WIRE

Teflon* Insulated Silver Plated Aluminum, newest development of America's pioneer wire specialists, offers these important advantages . . .

- Conductivity equal to that of copper with only **47% of the weight.**
- Termination and solderability properties of the best silver plated copper.

Designed to meet the requirements of the Space Age, Hudson's missile wire nevertheless is finding valuable applications in a wide variety of fields.

The manufacture of Hudson's missile wire is typified by rigid inspection and high standards. Since it is Hudson Made *All-The-Way*, from highest quality conductor rods to finished product conforming to MIL and NAS specifications, you are assured of the best.

Hudson, with 45 years of silver plating experience, also makes top quality silver plated copper wire for Teflon* insulated wire manufacturers. Hudson silver plate is regarded as the standard of the industry.

When you buy Teflon* wire, be sure to specify Hudson conductors. Ask our Research Department for advice on any of your wire problems.

Hudson manufactures Teflon* insulated Hook-Up wire types E and EE from A.W.G. sizes 10 to 30, in the following constructions:

XC — Silver Plated Copper
XA — Silver Plated Aluminum (47% the weight of copper)
XCW — Silver Plated Copperweld
XSP — Special Construction (to Specs.)
XR — Reinforced Core (provides a sheath of steel wires over a stranded silver plated aluminum or copper core.)

Phone or Write Hudson **NOW!**

GUIDANCE EQUIPMENT

Guidance equipment (electronic, inertial, optical) determines where the missile is relative to where it should be in order to hit its target, and subsequently issues corrective instructions to the missile control system. Guidance equipment also includes the control system that makes the missile change its direction of flight: the fins, hydraulic, electrical or mechanical circuitries, actuators, jetavators, jets, and so on.

NEW ELECTRO SNAP modular mounting

lighted push-button panel switch

Simplifies Control Panels; Saves Space, Cuts Cost.
May be used singly or in "stacked" arrangement.

This new Electro-Snap push-button panel switch efficiently combines a name plate, pilot light assembly and a switching unit in one compact modular assembly. The trim, streamlined design permits easy "stacking" on control panels or consoles. It eliminates congestion by replacing three individual units (nameplate, pilot light assembly and switch unit). You can achieve greater operating efficiency and quality appearance while making substantial savings in space and cost. A wide variety of configurations is available in:

- circuit arrangements of switch and pilot lights
- colored buttons for color coding
- colored lights for color monitoring

The operating and indicating combinations possible through the variation of arrangements provides almost unlimited applications for sequencing, movement-limit, start-and-stop, position-indicating and similar control operations.

Check the design and construction advantages of this significant advance in panel switches for your own applications. For further details contact your local representative or write to:

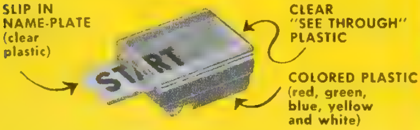
ELECTRO-SNAP SWITCH & MANUFACTURING COMPANY
4216 W. Lake St. • Chicago 24, Ill.
VA 6-3100 TWX #CG-1400

3 UNITS IN 1 COMPACT MOUNTING

NAME-PLATE + PILOT-LIGHTS + PUSH-BUTTON SWITCH UNIT

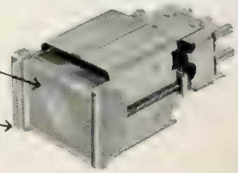
In one compact assembly, this unit provides new space and cost economy whether used individually or in "stacked" arrangement. You get quality appearance with "thumb-size" operation.

TWO-PIECE, PLASTIC NAME-PLATE PROVIDES EASY COLOR-CODING; SIMPLIFIES OPERATION IDENTIFICATION



SLIP IN NAME-PLATE (clear plastic)
START
CLEAR "SEE THROUGH" PLASTIC
COLORED PLASTIC (red, green, blue, yellow and white)

Virtually any operating condition can be identified with this push-button name-plate arrangement. The snap-in button is easily removed for insertion of slip-in name-plate. Use of various colored button bases, or various colored lamps, permits wide range of codings and monitoring.

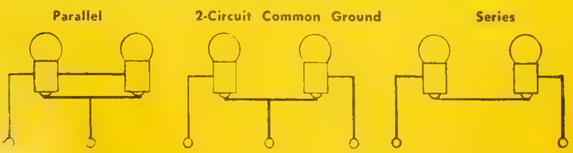


- Snap-in button permits easy lamp replacement from front of panel
- Barrier can be color-anodized to your specification

The lighted push-button switch assembly is also available without the switch unit for use where only pilot light duty is required.

VARIETY OF CIRCUIT ARRANGEMENTS PERMITS WIDE RANGE OF INDICATING AND SWITCHING COMBINATIONS

- Lamp circuit can be wired independently of switch circuit—or through switch unit.
- Since two lamps are provided, independent external circuits can be indicated on single unit with different lamp colors and white push-button.
- Complete push-button switch unit or pilot-light assembly can be supplied in any of the three following circuit arrangements.

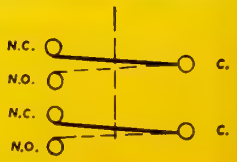


- 6V. or 28V. lamps may be used (solder terminals on lamp assembly)

Switch terminals available
- Solder
- Turret
- Double Turret
- AMP quick-disconnect

Switching Circuits to Meet Your Needs

The double-pole, double-throw switching unit may be wired normally-open or normally-closed.



a standard ELECTRO-SNAP UNIT

- Compact
- Space Saving
- Precision-Engineered
- Low Cost

heavy equipment contact. Good compensation plan. Box 318... Dealer.

applicant Call Mr. Hill for appointment. CH 1-2257

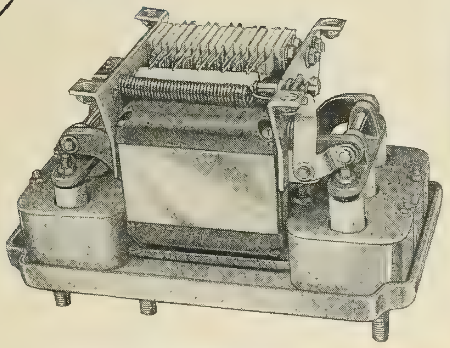
HAVE SPACE SUIT–WILL TRAVEL

Looking for new, challenging assignments in the far reaches of outer space. Can bring to bear on new job a half century of successful experience in field of relays and contactors. Plenty of references! More details available immediately. Phone collect LAfayette 4-1411, Mansfield, Ohio.*

SALES MANAGER

For national manufacturer of Rubber Bands selling to all businesses at every level by phone, mail and personal calls

Man With Retail Sales Experience



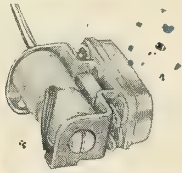
120 amp. 3PDT — Hermetically sealed transfer contactor

Don't send a boy on a *man's* job. Tremendous stakes are involved. Untold dollars—even national security—may hang in the balance. There is no substitute for experience!

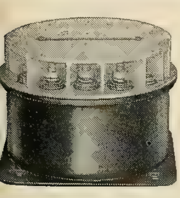
Hartman relays and controls are now being used in many aerial vehicles where hairline accuracy and reliability are required in environments of unusual temperature and vibration ranges. We specialize in custom-built aircraft and missile controls—both A.C. and D.C. Give us a ring or send a note, and we'll get in touch with you promptly!

**Or, clip and mail on your letterhead —show your name and department.*

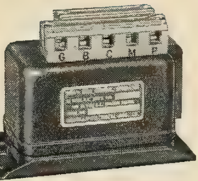
0v. 400c static overvoltage relay



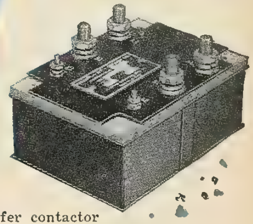
Control Relay — SPDT — Hermetically sealed contacts



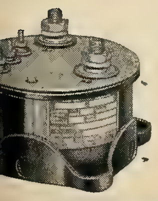
amp. 3PDT — Hermetically led transfer contactor



Hermetically sealed field control relay



200 amp. SPDT — transfer contactor



300 amp. SPST—Hermetically sealed contactor

Control headquarters— both AC and DC

JANUS:
protector of doors to heaven

PROTECTING AVIONIC SYSTEMS FROM
Temperature, Pressure, Moisture, Dust

Expanding aircraft performance creates new problems in protecting electronic equipment under extreme altitude and ambient conditions. Eastern's long experience in the field helps you to recommend electronic gear with confidence that performance will be reliable at temperatures from — 55°C to +55°C; from zero to over 70,000 feet.

Cooling Units, with or without refrigeration cycles, provide safe operating temperature limits in electronic equipment. Pressurization Units that meet government specifications maintain proper operating pressures at various altitudes, and utilize dehydrators that remove moisture and dust from ambient air. A program of research and development continually expands performance ranges to provide customized units to meet your needs.

When your problem is to make your electronic equipment perform efficiently under tough conditions, meet the challenge by asking Eastern for complete and creative engineering help.

RUGGED RELIABLE MINIATURIZED SELECTIVE STABLE SENSITIVE

SIGNAL OUTPUT
RCVR RADIO
INPUT
POWER
TDI SERIES 2002
RADIO COMMAND RECEIVER

The Tele-Dynamics 2002 Series miniaturized fm receivers are designed to meet conditions and characteristics required in drone, aircraft and missile service . . . and are presently being utilized in both IRBM and ICBM programs.

Modular sub-assembly construction, complete plug-in interchangeability, miniature size and weight allow 2002 receivers to be adapted to meet a variety of application and space requirements. The unit shown above is one of many configurations available. It can be used in service *without shock or vibration isolators.* Design, construction and performance are in accordance with military specification requirements.

Special pressurized cases can be supplied to permit use for altitudes up to 200,000 feet. Unit has been designed to meet radio interference levels of MIL-I-6181 and MIL-I-6910. Available for 28 Volt DC and 6.3 Volt AC operation.

Unit shown is Type 2002—5$\frac{3}{16}$″ W. x 4$\frac{3}{4}$″ H. x 9$\frac{3}{16}$″ D. Weight 8$\frac{1}{2}$ lbs. (other configurations to meet your design requirements).

- MISSILE AND AIRCRAFT TELEMETERING
- MISSILE AND DRONE GUIDANCE
- DATA ACQUISITION AND HANDLING SYSTEMS
- COMMUNICATIONS

Write today for complete technical specifications on Type 2002 as well as for Tele-Dynamics complete line of remote instrumentation equipments, systems and services.

CONTACTS ENLARGED 8½ TIMES
UNION SWITCH & SIGNAL
MINIATURE RELAYS

Typical group of UNION High-Quality Miniature Relays. Special manufacturing techniques are used to provide quality relays in large quantities. Ultrasonic and jet abrasive cleaning provide clean material. Unique baking and evacuation processes guard against gassing in the relay.

UNION family of high-quality miniature relays is designed for dependable performance in guided missile environments

Do you need a relay to operate with unusual reliability under severe conditions of temperature, shock, and vibration? Or one that functions on low "dry-circuitry" loads? For AC or DC circuits? Or special applications? You can find almost any relay you need in the UNION line.

UNION Miniature Relays were originally developed for use in airborne and guided missile electronic equipment and meet or exceed the requirements of Mil-R-25018, Mil-R-6106C and Mil-R-5757C. Their reliability and small size have led to their use in many industrial applications such as traffic control systems, computers, resistance welders and other electronic equipment.

Look over the many types of UNION Miniature Relays available, as shown here, and write for our Bulletin 1014 containing complete information.

Outstanding Features

1. **Superior Contacts** Standard HI-LO contacts permit high loads and low loads to be handled at the same time in one relay. Dry-circuit contacts are available when utmost reliability is desired for low-level, dry-circuit loads.

2. **Coil Resistances** Available in standard case from .9 to 8750 ohms and in long case from 1.6 to 13,600 ohms.

3. **Temperature Rating** Class "A" −55°C to +85°C; Class "B" −65°C to +125°C.

4. **AC or DC Models** Nominal operating voltages from 1.5 to 160 volts DC; 115 volts, 60 to 400 C.P.S., AC. AC relays incorporate built-in rectifiers and have same reliability as DC relays.

5. **Types and Mountings** All relays available in 6PDT or 4PDT models, plug-in or solder-lug connections, and all the usual mountings.

6. **Special Relays** *Slow-acting relays* for applications requiring a differential between operate time of various relays; *Plate-circuit relays* which operate on less than 8 milliamperes; *Double-coil relays* with each coil enabling operation of the relay . . . available on special order.

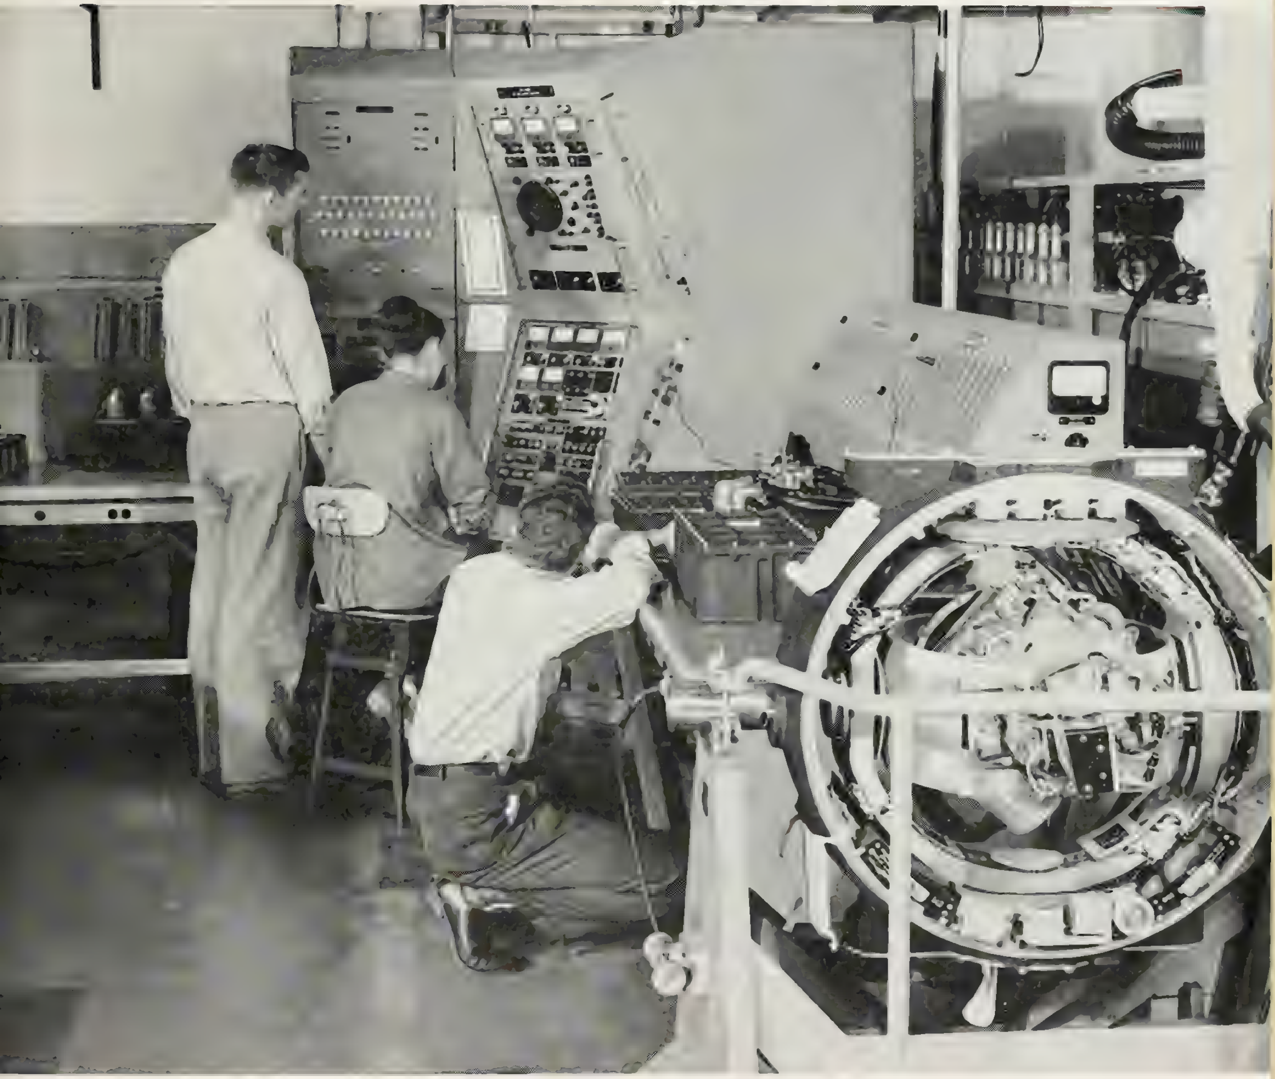
CHECKOUT EQUIPMENT

This equipment determines prior to launching whether all portions of the missile will or will not perform as intended. It is used to check out warhead, guidance, control and propulsion systems.



STEMCO THERMOSTATS

for electronic and avionic applications

Features to fit your *special requirements* for avionic and electronic applications—from standard, production-line Stemco thermostats. That's just *part* of the Stemco story.

Because Stevens makes the widest range of bimetal thermostats in the industry, we offer an unusual number of basic design types . . . various terminal arrangements and mounting provisions . . . different temperature ranges and performance characteristics. In addition, Stemco thermostats feature small cubage, light weight and proven reliability—*at a production price.*

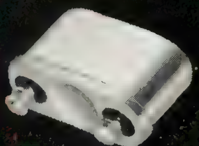
So get the Stemco story *first.* Write, call or wire *now* while your product is in the planning stage.

*Refer to Guide 400 EO for U.L. and C.S.A. approved ratings.

TYPE A*

Semi-enclosed

Insulated, electrically independent bimetal disc gives fast response and quick, snap-action control. Operation from —10° to 400°F or higher on special order. Various mountings and terminals. Rated from 4 to 13 amps at 115 volts AC, depending on service conditions; 4 amps at 230 volts AC and 28 volts DC. Bulletin 3000.



TYPE C

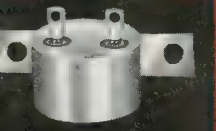
Hermetically sealed

Electrically identical to semi-enclosed Type C but sealed in crystal can. Also supplied as double thermostat "alarm" type. Turret terminals or wire leads. Bulletin 5000.

TYPE M*

Semi-enclosed

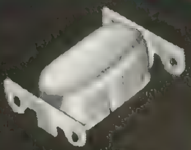
Electrically independ
bimetal disc type for
pliance and electronic
plications from —10°
350°F. Rating: 8 amps
115 volts AC, 4 amps
230 volts AC and 28 v
DC. Virtually any type
minal. Bulletin 6000.



TYPE A

Hermetically sealed

Electrically identical to semi-enclosed Type A. Temperatures from —10° to [illegible]°F. Various enclosures and mountings, including brackets, available. For [illegible] electronic, [illegible] applications. Bulletin 3000.



TYPE C

Semi-enclosed

Small, positive-acting. Electrically independent bimetal strip for operation from —10° to 300°F. Rated at approximately 3 amps, depending on application. Terminals and mountings to customer specifications. Bulletin 5000.

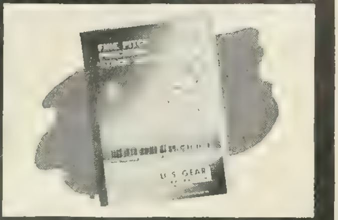
U. S. GEAR CORPORATION

FINE PITCH PRECISION GEARING

• • • • •

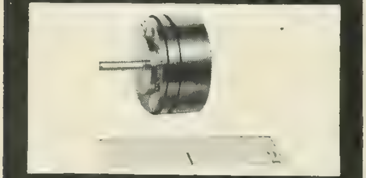
U.S. STOCK GEARS . . .



. . . available from 48 to 200 pitch in aluminum and stainless steel; are stocked in plain, hub, and clamp hub types; made to AGMA precision 1 and 2 classes.

Send for our Catalog

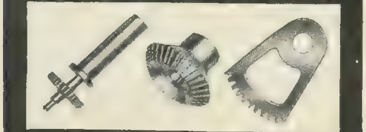
U.S. GEARheads . . .



. . . for Sizes 11 and 15 BuOrd Servo-motors are carried as standard items in planetary and spur types with ratios up to 20,000:1. Outstanding features are minimum size, extreme accuracy, and ratios available. Specification and data sheets available on request.

Special gear assemblies are designed and manufactured to meet customers' specifications.

U.S. SPECIAL GEARS . . .



. . . are furnished from 12 to 200 pitch complete or on a cutting only basis from ⅛″ up to 8″ in diameter to AGMA precision 1, 2, and 3 classes in all types and materials.

The 72-inch dia. hydrogen atmosphere furnace being lowered over a loaded furnace bell. Detroit plant.

Brazed stainless steel and titanium alloy parts are strong, undistorted, and bright and free of oxides.

If you are planning the manufacture of stainless alloy assemblies, you should check our facilities and skills for

BRAZING and PROCESSING

Stainless Steel & Titanium

You'll find our up-to-the minute facilities and years of experience can help you in your stainless steel brazing and heat treating. All three of our plants are equipped with pure dry hydrogen atmosphere furnaces, and are manned by skilled engineers. They are also pioneers in the use of Nicrobraz, the stainless brazing alloys that have the strength and corrosion resistance of stainless steel at 2000° F.

Vacuum-type furnaces are used in the Detroit plant for silver brazing complex titanium alloy assemblies. Our fluxless process provides high joint shear strength with no distortion, oxidation, or loss of ductility. Heat treating and degassing of titanium alloy parts is also done. Contact us for more information.

Specialists in the Manufacture of

HIGH PRECISION MACHINE PARTS
SINCE 1908

The equipment you are designing or building may well include a number of small high precision machine parts, and you will be anxious to see that they are produced by a firm in which you can have complete confidence. A firm competently staffed, well equipped, with years of experience, and a reputation for high quality production and complete dependability. LaVezzi, with a history of many years in this specialized field is the answer to this need, and earnestly solicits your quote requests. An illustrated brochure will be mailed promptly upon request.

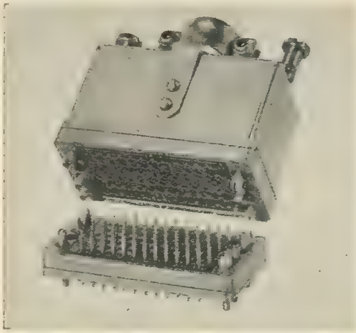
NEW COMPONENTS FOR MAXIMUM RELIABILITY DESIGNED FOR MISSILE, AIRBORNE, MILITARY, INDUSTRIAL ELECTRONIC CIRCUITS AND SYSTEMS

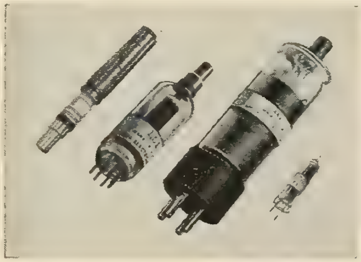
Integrated design and development program leads to production of an improved series of multipin connectors and ruggedized corona discharge V-R tubes.

Based upon suggestions of design and specification engineers of leading companies in the missile, airborne, military and industrial electronics field, new designs meet reliability demands of actual field requirements.



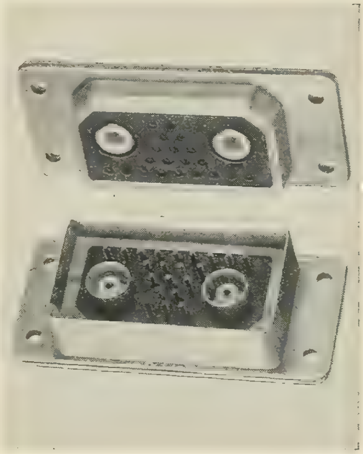
Equipment connector designers and components specification engineers have been encouraged by the development of a new reliable and rugged connector series. This Anton Series WM20 eliminates molding breakage conventionally encountered because of screw-lock and guide pin strain as well as mounting lip damage. It is interchangeable with existing Specification MIL-C-8384 types and is available for front or flush mounting applications.

Reliability and ruggedness of this Anton WM20 series results from a unique design improvement which incorporates the guide pins and screw-lock as part of a die-cast aluminum housing. This restricts all locking force and strain to the metal shell. It provides insurance against obvious as well as hidden strain cracks. Mounting lip breakage is done away with by elimination of the plastic mounting lip in the latest Anton connector development. The connector also incorporates body float which helps eliminate alignment problems. This greatly improves reliability in applications where vibration is encountered.



You can now achieve precise voltage regulation for low current application over a range from 400 volts to 30 KV in a reliable, inexpensive, simple and straightforward manner—the use of Anton Corona Discharge Voltage Regulator tubes. Over 500,000 Anton Corona V-R tubes have been used successfully for stabilizing power supplies or as voltage reference tubes in the field of radiac, missile and airborne electronics. Tubes are available ranging in size from subminiature to standard.

To help design and specification engineers determine whether their high voltage low current regulation problems can be solved economically, Anton Electronic Laboratories will send a free reprint of a theoretical and practical dissertation, "Corona Discharge V-R Tubes", upon request.



High and low voltage plus high and low current connections are provided in a single unit by Anton's Series "S-20" connectors. This same series also provides designs which combine coaxial and standard contacts. Space-saving, moisture-proof and strength qualities have also been designed into this new "S" series. The dominant feature is a single molding (Standard Diallyl Phthalate) in each half of the connector. This eliminates "moisture trap" usually found in old style two-piece moldings.

Considerable shut-height space is conserved by a unique counter-sunk mating design. Pins are completely protected. There is positive shell polarization and alignment. The molding is housed in a precision die-cast, irridited aluminum shell. This shell protects, mounts and aligns the connector. For test and trouble shooting convenience, plug and socket can remain "live" when disconnected because the shell also serves to prevent the accidental short circuiting of pins when plug is in open position.

PLEASE VISIT US OR WRITE

All Anton components can be seen at our plant. When you visit New York, you are cordially invited to relax and discuss your component needs with our engineers. But don't wait till then. Write Dept. MR for free, complete data — NOW — on all of Anton's special electronic components.

High-heat High-impact
MOLDINGS *for* MISSILES

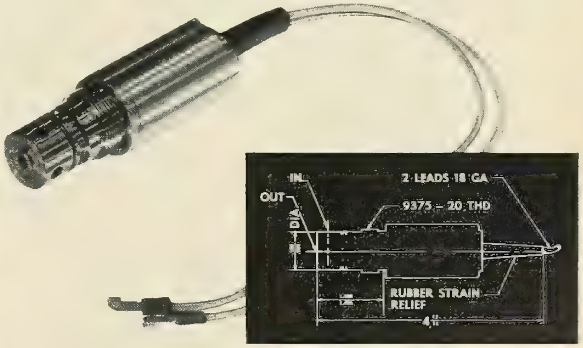
Approach cone insulator
Deflector plate • Booster vent plug
Small vent plug

WE MAKE THESE FOR THE *Navy "Terrier"*
to withstand 1500° F. (2500° intermittent)

We offer you:
- Our ability to produce moldings made from tough, missile materials.
- Wide experience in custom-molding design, production, and finishing.
- A new, modern plant and machinery.

Write us for quotation on your plastics molding needs.

Brook MOLDING CORPORATION
30 INDUSTRIAL WAY NORWOOD, MASS.



Proven Valve Performance

. . . is behind the development and precision production of this K-W high pressure air or hydraulic solenoid valve. Only minimum mounting space is required for this valve whose two closely spaced annular ports are seperated by face sealed "0" rings. Operating up to 3000 psi. at 17 to 30 volts DC in a -65° to 165° F. ambient range, this is but one of many valve and solenoid applications developed by Koontz-Wagner for the aviation industry. If your problems include the need for design and production of specialized electro-mechanical devices, write:

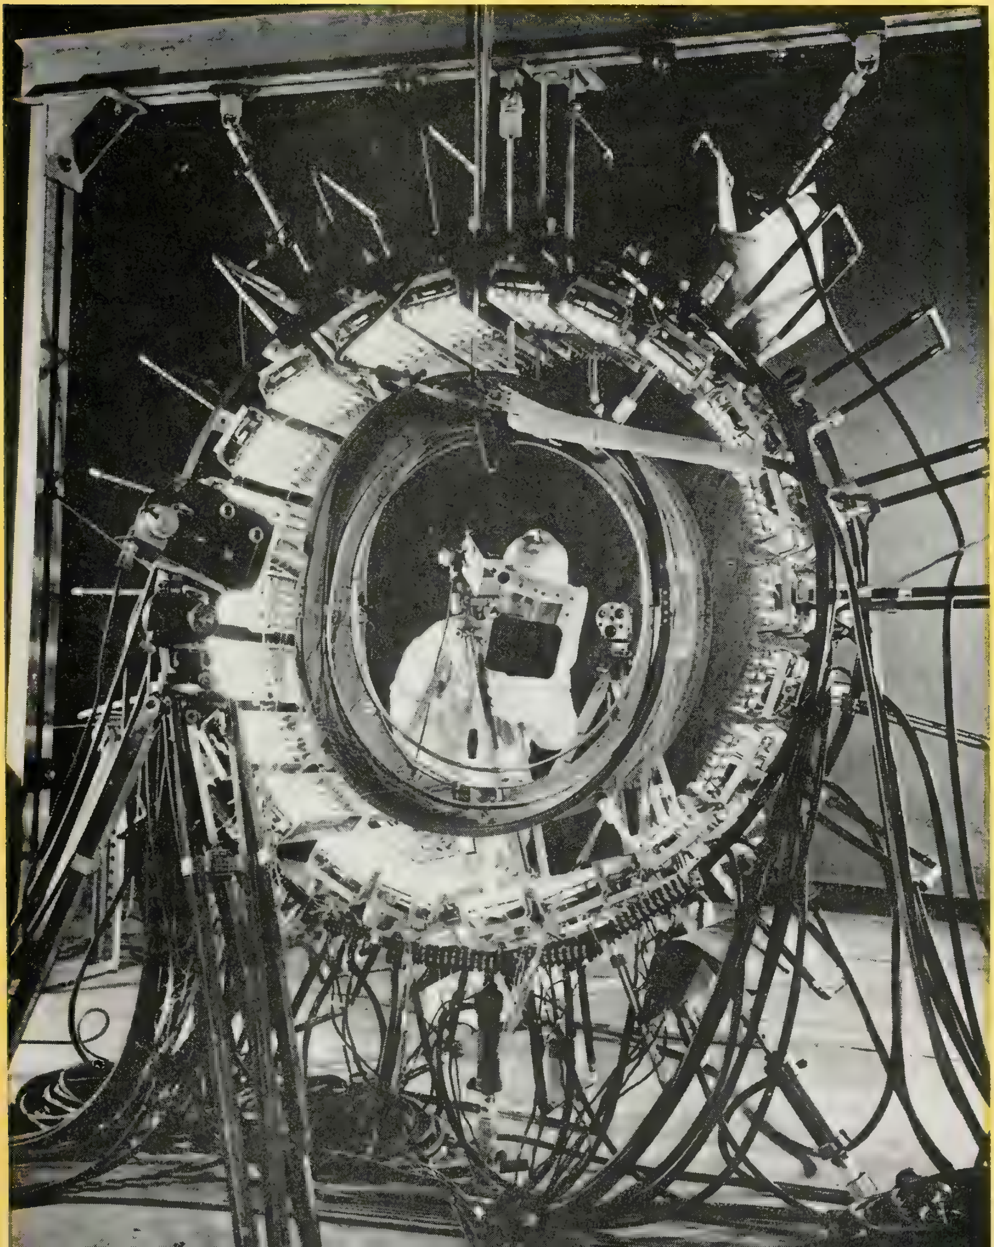
TEST EQUIPMENT

This includes everything in missile testing, ranging from checkout equipment through static test stands, launching pads and flight simulators.

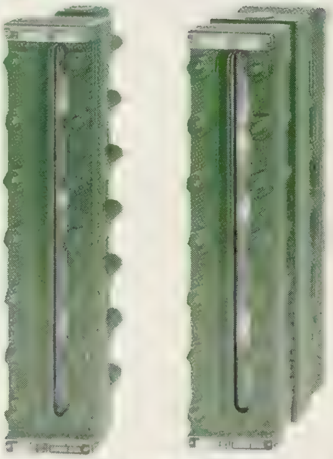


there is certain satisfaction in products by PENBERTHY

PENBERTHY Direct Reading LIQUID LEVEL GAGES

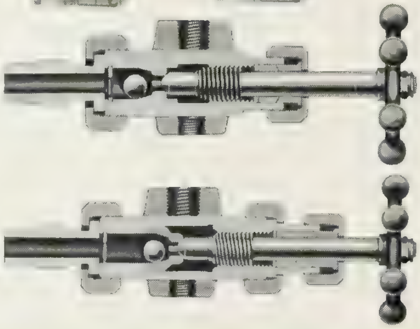
- **Pressures to 10,000 PSI or higher**
- **Temperatures sub zero to 750°F. plus**
- **Positive Accurate Measurement**
- **Direct Observation of Fluids**

In the missile program, Penberthy gages and valves are serving successfully in a variety of applications from testing to fuel loading. They are obtainable in a choice of materials and designs, both standard and special, for handling liquids of any kind. Used individually and in sets. All materials are strictly according to ASTM, ASME and API specifications.



REFLEX (fluid shows black) — 3 pressure groups, liquid chamber lengths to 12′, feature light weight, low cost, strength, safety and durability. Service to 3000 psig.

TRANSPARENT (for fluid observation) — 4 pressure groups, liquid chamber lengths to 12′, feature exceptional strength, safety and ruggedness. Service to 10,000 psig.



GAGE VALVES (for tubular and flat glass) — available in selection of materials and designs. Penberthy's patented "floating shank" eliminates assembly difficulties caused by variations in vessel connections.

Special Service Designs and Accessories

HEATING-COOLING GAGES — To suit conditions where liquid is cooled or heated to stabilize level. Two designs.

FROST PROOF GAGES — Insulates against closure of visibility with frost.

WELDING PAD GAGES — Provide observation windows as integral part of vessel.

MISCELLANEOUS DESIGNS — Retort chambers, welding-flanged-side connected, plastic or rubber lined units and other special designs supplied to individual requirements.

ACCESSORIES — Explosion-proof and standard illuminators, protectors, instrument valves, trycocks, drain and vent valves and gage scales.

Write for detailed literature. Penberthy engineers are also at your service for consultation and recommendations.

[illegible] (JET PUMPS)

Used increasingly to simplify handling of fluids, vapors, gases and "hot" materials. Steam air and liquid operated for liquid transfer, heating, circulating, aerating, agitating, mixing, pumping, blending, exhausting. Trouble-free. Available in selection of materials. Standard and Special Designs.

Bench-Top Proving Ground for Missile Controls!

Directional controls for guided missiles . . . tracking and scanning devices . . . cameras . . . range finders—how well they work depends greatly on the efficiency of their optical systems.

Recognition Contrast Rendition equipment at B&L completely eliminates human error in measuring optical efficiency. Its direct-reading scale automatically rates how well an optical system can "see" under lighting conditions of variable intensity, as experienced in actual use. Accuracy: 1/40th of a wavelength of light!

OPTICAL COMPETENCE

This instrument is not for sale. It is part of the unique quality control system that has made Bausch & Lomb the dependable optical source.

WRITE FOR COMPLIMENTARY COPY OF LIMITED EDITION, "OPTICAL COMPETENCE"

(on official letterhead, please, indicating title.) Bausch & Lomb Optical Co., 87058 St. Paul St., Rochester 2, New York.

LINDSAY PRESSURE GAUGE used in jet aircraft. Model #6907-1 shown here in actual size; total weight .20 pounds. (Other models for missiles and special applications.)

NEW LINDSAY GAUGE

designed for jet pressure systems

The RMC-Lindsay Pressure Gauge for jet aircraft is made for extensive cycling—will meet rigid endurance and over-pressure requirements. Not even the most extreme conditions of shock, vibration or temperature disturb its accuracy. Pressure ranges from 1,000 to 15,000 psi.

The RMC-Lindsay Gauge is a bourdon tube type, using a multiple coil, helical bourdon tube with the pointer attached directly to the end of the coil. The life of the Lindsay helical bourdon coil, as compared to the traditional "C" spring bourdon gauge, is more than 10 times greater and its proof pressure limits are increased by a factor of 3 or 4. The helical bourdon tube also eliminates the use of linkages and pivots, improving the gauge's shock resistance by a factor of 5 or 10.

The helical bourdon element is, of course, not a new development. However, the RMC-Lindsay techniques in coiling, heat treatment, calibration and material specifications *are* new—and exclusive with RMC.

Whatever your high pressure gauge problems may be, why not let RMC engineering skill provide the answers. Write to either of the below addresses, outlining your particular requirements.

AIRBORNE RELIABILITY

How will complex aircraft and missile equipment perform under actual flight conditions?

Aerotest is helping the country's leading manufacturers answer this vital question before it's too late — by providing well planned and skillfully executed programs of functional, environmental and qualification testing.

Backed by modern facilities and a staff of professional test engineers, Aerotest can accurately simulate flight conditions for electronic, mechanical, pneumatic, hydraulic and avionic equipment — while conducting all types of tests performed in accordance with the latest government and commercial specifications.

ATTENTION MISSILE-MEN

Aerotest now offers complete flow testing facilities for missile equipment exposed to fuels and oxidizers — hydrogen peroxide, liquid nitrogen, ethylene oxide, liquid oxygen, and others.

Aerotest Laboratories is an approved prime contractor to the U.S. Navy and U.S. Air Force. Certified test reports, full security clearance and resident government inspectors.

Complete test program proposals submitted without obligation.

Aerotest Laboratories, Inc.

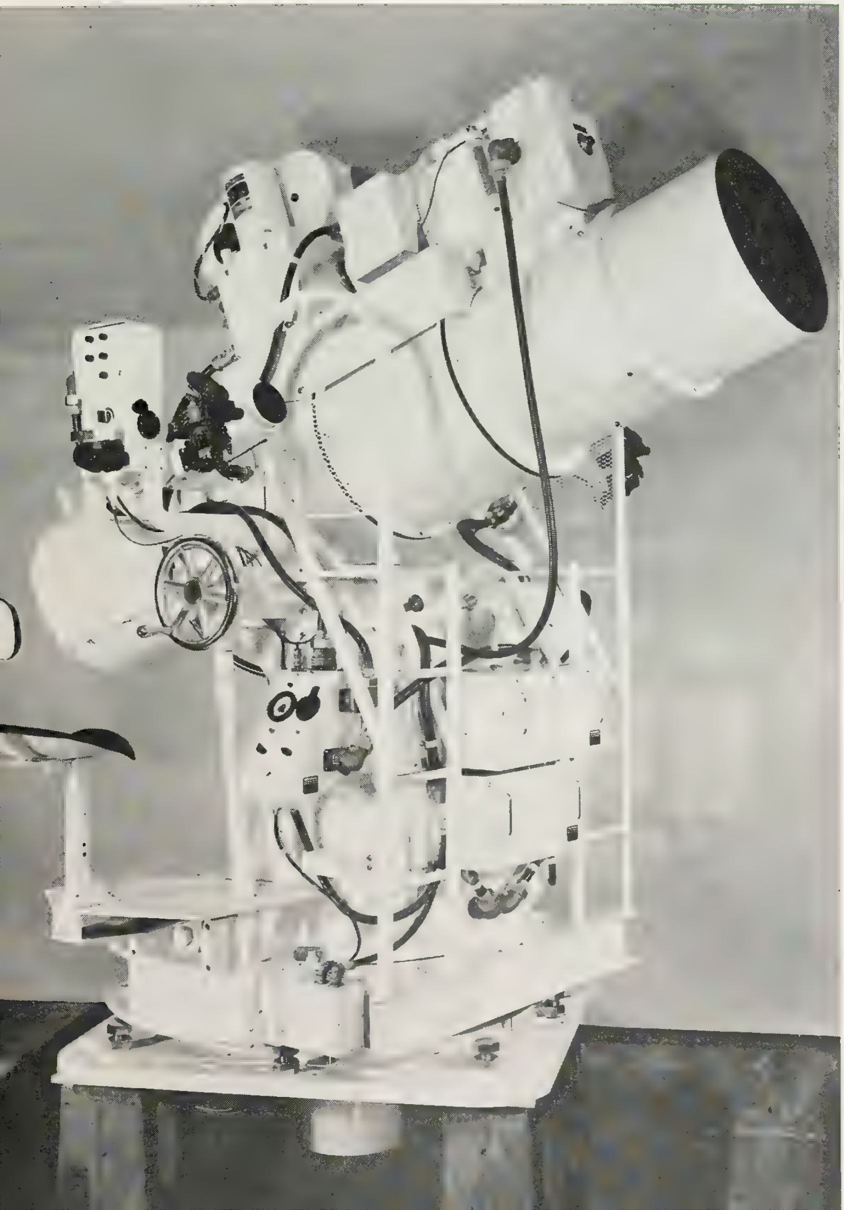
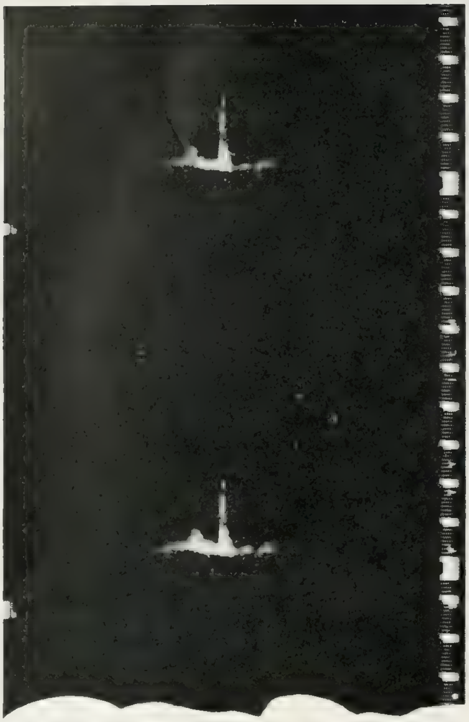
TRACKING AND TELEMETERING EQUIPMENT



These devices (optical, electronic, or both) follow a missile in flight and report on how it is actually functioning internally. This equipment includes telemetry, radio, radar and optical devices.

EXPLORER 1
"Take 1"

CAMERA: THE NEW MOD V 70-mm MISSILE TRACKING



Film: 70-mm LINAGRAPH SHELLBURST
LENS: Kodak Aero-Ektar; focal length 20-inch; lens stop, f8; range, 2000 feet approx.
Range: 2000 ft.
Camera Speed: 10 frames/second.
Shutter: 45° opening
Subject: EXPLORER I, initial flight stage, Cape Canaveral, Fla.
Date: Jan. 31, 1958
Time: 10:58 PM

That one "first take" *has* to be right for missile tracking . . . because there can't be any second trys or retakes!

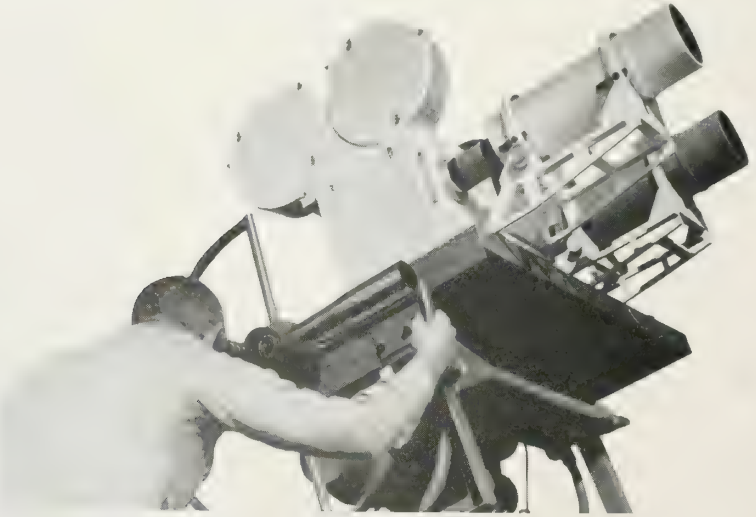
And the new Flight Research *70-mm* tracking camera is your best assurance of a *good take, every time.* This exact-size film strip proves the performance of this MULTIDATA*Mod V 70-mm—the camera that was designed specifically for missile tracking purposes.

The greater dimensions of the 70-mm field are available now for surer following of the target. The far longer range permits observation of the missile's path for greater distances. Detail is excellent, and image resolution unsurpassed.

Flight Research's unique film transport device eliminates the vibration that has plagued previous attempts to produce a satisfactory big-field data camera, and the registration pins guarantee exact frame-to-frame alignment while holding the film completely at rest during exposure.

The Mod V 70-mm is the newest member of the Flight Research advanced line of data cameras. For full information on the new Mod V, and on other photographic instrumentation equipment, call or write our engineering applications staff.

*TM



FLIGHT RESEARCH
INCORPORATED

P. O. Box 1-F, 5 Byrd Field Richmond 1, Virginia

The CAMERA
MULTIDATA **Mod V 70-mm**
Designed for missile-tracking and other extraordinary technical requirements.
Film speeds: 10 to 60 frames/second.
Film capacity: 1000 feet.
Choice of lens equipment.
Shutter adjustable: 0° to 120°.
Absolute frame-to-frame alignment.
Can be synchronized with other cameras.
Timing lights for coding with millisecond accuracy.

Readying parts for heat treatment

Whatever your problem may be, our engineering, development and production facilities are at your disposal. Write, wire or phone for information.

STALKER
DEVELOPMENT COMPANY
905 Woodside Avenue
Essexville, Michigan

IS YOUR PROBLEM HIGH TEMPERATURE BRAZING OF SUPER ALLOYS ?

Stalker facilities include experienced personnel, production and test equipment, and certificates for the fabrication, welding or high temperature brazing of prototype or production lots of jet, ram jet or missile components.

We specialize in working with superalloys including A-286, 17-7, Nimonics, Inconel, Hastelloy, Molybdenum and other stainless steels with special techniques and processes to insure successful brazing of metals containing aluminum and titanium.

Super-sensitive DV Nose Boom monitors the Navy's Regulus II

Chance Vought had a problem: Packaging a host of intricate equipment in a needle-thin boom to monitor the Navy's new guided missile, Regulus II. This "packaging" was additionally complicated by the requirement that to conserve storage space on board a submarine, the boom must fold pneumatically by remote control.

Dalmo Victor's engineering skill, acquired through development of airborne radar scanner designs, provided the answer!

The ten-foot DV pitot static boom, as accepted by the Navy, meets these most exacting design requirements and provides vital data, including airspeed and altitude, as well as angles of attack and yaw.

Long-recognized leader in airborne radar antennas, Dalmo Victor now applies its experience and skills to create missile components. Contact the nearest DV office for help in solving similar problems.

R.C.Allen Rate Gyros

FIFTEEN YEARS OF GYRO EXPERIENCE

Growing yearly with superior design, production and service

Furnish us specifications and we will deliver the rate gyro to meet your specific requirements. We design, test, and furnish prototypes. Exacting quality control consistently guarantees superior performance. Fast, complete customer service is a recognized necessity!

VITAL FACTS — Damping controlled within 0.4 critical over temperature range of −55°C to +80°C without heaters. Vibration: 20 G to 2000 cps. Acceleration and Shock: 100 G along any axis. Pick-off: 1000:1 minimum signal-to-noise ratio.

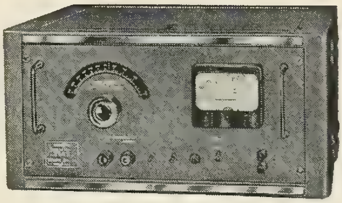
Check Your Guidance System
with Accurate 400-Cycle

INVERTRON®
AC Power Source



The Behlman INVERTRON
is a Completely Electronic
Source of Stable AC Power

Whether you need 400-cycle or other AC power, you will be able to perform much more accurate tests with the silent, wholly dependable Behlman INVERTRON. Now used by leading aircraft, missile, and other manufacturers throughout North America, INVERTRON offers power output ratings from milliwatts to kilowatts, fixed or variable frequencies from subsonic to supersonic, and accuracies to .001% according to model. WRITE today for further facts.

NEW LITERATURE NOW AVAILABLE

Tell us your power problem. Let us show you how our modular construction techniques can provide you with custom instrumentation at production line prices.

Hayward

manufacturers of more than fifty types of

OPTICAL GLASS

made to the highest military standards of quality

PRODUCTS *glass for massive optics • lead glass — cerenkov and shielding types • prototype glass • slab glass pressings — lens, prisms and cluster blanks, special shapes hayward processed pyrex brand glass number 7740*

SERVICES *custom annealing • optical data furnished with each order blanchardising • research and development on new and special types of glass*

for assistance, present us your problems — catalog on request

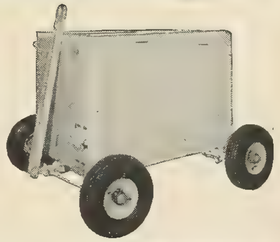
PRESSURIZATION!!!

Now get the facts on Kahn's versatile new Portable Air Stand. This dependable, portable equipment provides HIGH PRESSURE – dry air or nitrogen for pressurizing aircraft or missile systems.

- 4-Stage Compressor delivers 15 SCFM of dry air at pressures to 5000 PSIG.
- Kahn's High Pressure Automatic Dryer provides dryness of minus 65 degrees F. or lower dew point.



KAHN'S HIGH PRESSURE PNEUMATIC ACCESSORIES TEST STAND

Highly versatile 3-Station Component Test Stand delivers 5000 psi. air at minus 65 degrees F. dew point. Tests components such as Pressure Switches, Solenoids, Cylinders etc. KAHN'S INTERLOCK SAFETY feature prevents component tampering under pressure.

Leitz

ULTRA PRECISION IN SPACING

on guided missile components and similar critical work guaranteed by this exclusive DOUBLE-MICROSCOPIC PICK-UP of the LEITZ OPTICAL MASTER DIVIDING HEAD.

It compensates for run-out, the most common source of error. Working accuracy 1 second of arc.

There is no substitute for LEITZ in optical dividing.

Now, you will receive complete Missile-Rocket news and reports of developments four times as frequently—and at no additional cost.

When Missiles and Rockets becomes a weekly publication in July, subscription rates will remain the same*

Why not give one of your associates or friends in the industry a new subscription to M & R? It can't help but be just as valuable to him as your subscription is to you! Now's the time to do it--just clip this order coupon today.

Special Gift Subscription Coupon

MISSILES AND ROCKETS
1001 Vermont Ave, Washington 5, D. C.

for:

☐ Check enclosed ☐ Send bill

A specially-prepared gift-card, bearing your name, will be sent to the recipient of your gift-subscription.

PRODUCT CROSS INDEX

A

AC-DC converters 276
AC motor speed controls, electronic 409
AC power supplies 242
AF choke coils 297
AF generator, electronic, signal 232
A-F signal electronic generators 180
AM tuners 396
AM fixed frequency receivers 323, 426
AM-FM communication receivers 323, 426
AM-FM electronic generators 180
AM-FM generators, electronic 231
ATR Tubes 395
Absorbers 285, 401
Absorbers, microwave 421
Absorbers, vibration 143, 212
Absolute pressure potentiometers 356, 385
Absorbers, power 385
Absorption analyzers, neutron 365
Absorption analyzers, neutron, nuclear 383
Acceleration meters 378
Acceleration switches 332
Acceleration test units, military 392
Accelerator test equipment 389
Accelerators, particle 159
Accelerator transducers 393
Accelerometers 343
Accessories & components, engine 173
Accessories and fittings, antenna 400
Accessories, microwave 383, 421
Accessories & suppliers, lighting 267
Accumulator charging valves 255
Accumulators 285, 399
Accumulators, hydraulic 267
Acid resistant valves 207, 255
Acid valves 206, 255
Acoustic chambers 368
Acrylic plastic 127
Actuators 149 285
Actuators, electric 361, 399
Actuators, hydraulic 285, 361
Actuators, linear 285
Actuators, pneumatic 217, 285
Actuators, rotary 159, 285
Adapters 361, 399
Adapters, air 159
Adapters, battery 267, 286, 399
Adapters, crystal 361, 399
Adapters, field sequential 399
Adapters, foreign 361, 399
Adapters, lamp socket 267, 343, 361
Adapters, line and dot sequential 361, 399
Adapters, phase 343, 361, 399
Adapters, plug 361, 399
Adapters, test 361
Adapters, tube 361, 399
Adapters, tube socket 361, 399
Adhesives, high temperature 105, 149
Adhesives, metal to metal 105, 149, 286
Afterburner valves 159, 207, 255
Afterburners 159
Aftercoolers 159
Aging, vacuum tube & transistor racks 246
Air adapters 159
Air baffles 160
Air combustion regulators 194
Air compressors 223
Air conditioning equipment 105, 286
Air conditioning machines 238
Air cylinders 172, 224
Air data computers 111, 369, 408
Air filters 176, 227
Air hose 182, 234
Air inlet guide vanes 159
Air inlet screen supports 105, 159
Air position indicators 416
Air pressure gauges 372
Air pressure regulators 194, 247
Air pumps 192
Air ram switches 332
Air regulators 247
Air speed indicators, true 415
Air system manifolds 123, 187
Air temperature gauges, outside 372
Air turbines 206
Air valves 207, 256
Airborne film recorders 429
Airborne hoists 118
Airborne ignition systems 183
Airborne landing systems 105
Airborne magnetic recorders 429
Airborne radar 322
Airborne refrigeration equipment 193
Airborne rocket launchers 236
Alarm switches 332
Alarm system controls 346, 369
Alarm systems 149, 159, 343, 361, 399
Alarm systems, fire 228
Alarms, auto 159, 286, 343, 361
Alcohol pumps 192
Alignment tools 393
Alligator clips 297, 407
Alloy and metal tubing 205
Alloys, high permeability 105, 149
Alloys & lead 186
Alloys & magnesium 187
Alloys & silver 200
Allyls plastic 127
Alnico 286, 361
Alpha chambers, nuclear 368, 383
Alpha counters, nuclear 384
Alternators 286, 361, 399
Altimeters, barometric pressure 361, 399
Altimeters, radio and radar 286, 399
Altitude simulating, test equipment 389
Aluminizers, vacuum 254
Aluminum 105, 267
Aluminum foil 116
Aluminum oxide 126, 154
Aluminum oxide insulation materials 119
Aluminum solder 200
Aluminum tubing 142, 204
Aluminum wire 145
Alundum grain 181, 233
Amateur & communication receivers 427
Ammeter meters 351, 378
Ammeter RF meters 352, 379
Ammeters 343, 361, 399
Ammeters, electrical measuring instruments... 310, 376, 418
Amplidynes 159, 286
Amplifier audio analyzers 345
Amplifier tubes, power 396, 439
Amplifiers 286, 343, 361, 399
Amplifiers, antenna 286
Amplifiers, audio subminiature 343, 362
Amplifiers, booster 343
Amplifiers, cathode followers 343, 362
Amplifiers, compressor 159
Amplifiers, computer 362
Amplifiers, control 286
Amplifiers, cuing 286
Amplifiers, DC 362
Amplifiers, data recording 343
Amplifiers, decade, audio 343, 362
Amplifiers, development 362
Amplifiers, differential 343, 362
Amplifiers, direct current 344, 362
Amplifiers, distribution, audio 362
Amplifiers, distribution, RFIF 362
Amplifiers, encapsulated 286, 363
Amplifiers, industrial sound 267
Amplifiers, instrumentation 363
Amplifiers, integrating 288
Amplifiers, intermediate frequency 363
Amplifiers, isolation 363
Amplifiers, limiting 363
Amplifiers, line 363
Amplifiers, line audio 288
Amplifiers, logarithmic 363
Amplifiers, magnetic 288
Amplifiers, microphone 267, 344
Amplifiers, microwave 288, 363
Amplifiers, mixing audio 267, 363
Amplifiers, mixing, RF 288, 363
Amplifiers, mobile 288, 344, 363
Amplifiers, monitoring audio 363
Amplifiers, monitoring RF 344, 363
Amplifiers, noise-suppressing 288
Amplifiers, operational 288, 344, 363
Amplifiers, oscilloscope 344, 363
Amplifiers, peak limiting 344, 363
Amplifiers, photocell 288
Amplifiers, plug-in 364
Amplifiers, power 288, 344, 364
Amplifiers, power, special service 344
Amplifiers, printed circuit 290
Amplifiers, servo 290
Amplifiers, single-sideband 290
Amplifiers, stabilizing 344, 364
Amplifiers, strain gage 344, 364
Amplifiers, tone control 217
Amplifiers, ultrasonic 290, 364
Amplifiers, vibration pickup 290
Amplifiers, wideband, audio 344, 364
Amplifiers, wideband, RF 344
Amplitude linearity testers 392
Analog computers 299, 408
Analog data recorders 412
Analog digital converters 410
Analysis equipment, crystal 370
Analysis equipment, electro-chemical 344, 364
Analysis equipment, magnetic 350, 378
Analyzers 159, 290, 344, 364, 399
Analyzers, antenna pattern 345, 364
Analyzers, audio, amplifier 345, 364
Analyzers, cable 217, 267, 345, 364
Analyzers, capacitor 364, 400
Analyzers, circuit 292, 364
Analyzers, coincidence 345, 364
Analyzers, coincidence, nuclear 383
Anaylzers, crystal 345, 364
Analyzers, differential 292, 400
Analyzers, differential, computer 364, 400
Analyzers, digital 364, 400
Analyzers, dimensional 345, 364
Analyzers, distortion 345, 364
Analyzers, electro-chemical 159, 345, 364
Analyzers, engine 159, 345, 365
Analyzers, flight 105, 400
Analyzers, frequency 345, 365
Analyzers, gas 159, 372
Analyzers, ignition 159, 345, 365
Analyzers, infrared 365, 400
Analyzers, intermodulation 345, 365
Analyzers, internal combustion 160
Analyzers, magnetic 345, 365
Analyzers, microwave 345, 365, 398
Analyzers, neutron absorption 160, 345, 365
Analyzers, neutron absorption, nuclear 383
Analyzers, noise 345, 365
Analyzers, phase 292, 345, 356, 365, 385
Analyzers, radar 400
Analyzers, servo 292
Analyzers, spectrum 160, 345, 365
Analyzers, spectrum, nuclear 345, 383
Analyzers, stress 105
Analyzers, surface 105
Analyzers, transducer 292, 345, 365
Analyzers, transistor 338, 345, 365, 395, 438
Analyzers, ultrasonic 345, 365, 398
Analyzers, vibration 105, 160, 365
Analyzers, wave 365, 398
Analyzers, waveform 365, 398
Anemometers 345, 365
Aneroid switches 332
Angle drives 160
Angle indicators, dive 373
Angle-of-yaw indicators 416
Annunciator wire 263, 442
Annunciators 365, 400
Anodes carbon tube parts 338
Anodes, gold tube parts 338
Anodes, graphite 292
Anodes, metal 345, 400
Anodes, metal tube parts 338
Anodes, silver tube parts, 338
Antenna ampliers 286
Antenna bases 402
Antenna feed systems 292, 400
Antenna filters 303, 414
Antenna, fittings and accessories 292, 400
Antenna forms 416
Antenna insulators & spring assemblies insulators 313
Antenna links 421
Antenna mounts 189
Antenna outlets 319, 424
Antenna pattern analyzers 345, 364
Antenna pattern recorders 429
Antenna phase monitors 422
Antenna position indicators 416
Antenna switching equipment 336, 435
Antenna tension springs 434
Antenna tower lighting 217, 400
Antenna transmission cable 220
Antenna tuning units 292, 340, 400, 441
Antenna wire 264, 442
Antennas 400
Antennas, direction finding 303, 400
Antennas, fixed station 401
Antennas, high frequency 401
Antennas, loop-direction finder 401
Antennas, low frequency 401
Antennas, microwave-radar 401
Antennas, mobile commercial 217
Antennas, mobile communication 217, 267
Antennas, radar 401
Antennas, radiation test 149, 160
Antennas, rotary beam 401
Antennas, slotted line 401
Antennas, ultra high frequency 401
Antennas, very high frequency 402
Anti-gravity valves 207, 256
Antimony 105, 160
Anti-vibration equipment 160, 345, 365
Apparatus, geophysical 372
Arc back indicators 373
Arc lights 236
Arc-over indicators 373
Arms, pickup 425
Arrestors, lightning 236
Arsenic 365
Asbestos 105
Asbestos cement 107, 164
Asbestos insulated wire 264, 442
Asbestos insulation materials 119, 184
Asbestos tapes 141, 202
Asbestos tubing 142, 204
Asphalt 160, 217
Assemblers, feeders 402
Assemblies, bellow 160
Assemblies, cable 217, 267, 272, 366
Assemblies, coil 368, 407
Assemblies, compressor 167
Assemblies, embedded 151, 173
Assemblies, exhaust 174, 227
Assemblies & fabrications, tubular 205
Assemblies, ignition 182
Assemblies, ignition tube 182
Assemblies, jack panel 420
Assemblies, joint 186

Assemblies, microwave 402
Assemblies, pilot light 385
Assemblies reduction, gear 228
Assemblies, shield, nuclear 383
Assemblies, slip ring 200
Assemblies, turbine 206
Assembly equipment, automatic 218, 267
Assembly shield, nuclear 149, 160
ATR tubes 339, 438
Attachment cords 224
Attenuation meters 352, 379
Attenuators 402
Attenuators, A-F 402
Attenuators, audio 292, 402
Attenuators, logarithmic 402
Attenuators, microwave 292, 402
Attenuators, precision 292, 402
Attenuators, R-F & I-F 292, 402
Attitude 293
Attitude gyros 308
Audio, amplifier analyzers 364
Audio attenuators 292, 402
Audio consoles 223
Audio decade amplifiers 343, 362
Audio distribution amplifiers 362
Audio filters 303, 414
Audio fork controlled oscillators 318, 423
Audio frequency oscillators 318, 423
Audio meters 352, 379
Audio monitors 422
Audio operated relays 326
Audio oscillators 317, 423
Audio recording controls 409
Audio remote pickup 329, 432
Audio subminiature amplifiers 343, 362
Audio transformers 252, 436
Audio wideband amplifiers 344, 364
Audiometers, electrical measuring instruments 310, 376, 418
Aural test equipment 389
Auto alarms 159, 286, 343, 361
Automatic approach controls 300, 409
Automatic assembly equipment 218, 267
Automatic cycle timers 356
Automatic engine control systems 174
Automatic dehydrators 276
Automatic mixture controls, fuel systems & equipment 177
Automatic pilot control valves 293
Automatic pilots 320
Automatic pilots, electronic 293
Automatic pilots, hydraulic 293
Automatic radio alarm receivers 323, 426
Automatic reset timers 357
Automatic resistance comparators 346, 408
Automatic sequence timers 357
Automatic shutoff valves 256
Automatic shutoff-hydraulic valves 207
Automatic switches 332
Automatic transfer switches 281
Automatic tube testers 392
Automatic tuners 340, 396, 440
Autopilot control valves 207, 256
Auxiliary drop tanks 201, 251
Auxiliary equipment, camera 367, 404
Auxiliary jet engines 174
Auxiliary power sources 218, 267
Auxiliary rocket engines 174
Auxiliary tanks 140, 201, 251
Aviation test equipment 389
Axial flow compressor asemblies 167
Axial flow midfame sections 383

B

Backward wave tubes 339, 395, 438
Badges, radiation 149, 160
Badges, radiation, nuclear 383
Baffles, air 160
Balancing controls—fuel systems & equipment 177
Balancing equipment 365
Balancing machines 238
Ball bearings 218, 268
Ball latches 293
Ball miniature bearings 293
Ball joints 186, 218, 268
Ballast tubes 339, 438
Ballistocardiographs 402
Balometer tubes 339
Band elimination filters 304, 414
Band pass filters 304, 414
Bank & turn indicators 416
Bare copper wire 145
Barium 105, 160
Barographs 345, 365
Barometers 366
Barometric pressure altimeters 361, 399
Bases 218, 268
Bases, antenna 402
Bases, diode 402
Bases, relay 402
Bases, transistor 293, 402
Baths, salt 387

Batteries, atomic 293
Batteries, dry cell 366
Batteries, lead-acid 366
Batteries, mercury 293
Batteries, nickel alkaline 293
Batteries, nickel-cadmium 293
Batteries, nuclear 293, 317
Batteries, silver 293
Batteries, silver zinc 293
Batteries, transistor 293
Battery adapters 267, 286, 399
Battery boxes, cradles, etc. 218, 268
Battery charger tubes 339, 395, 438
Battery chargers 222
Battery charging regulators 326
Battery charging and servicing equipment 268
Battery clips 222
Battery servicing equipment 218
Battery testers 392
Beacons, crash locator 218
Beacons, radar 400, 426
Bead insulation parts 420
Bead insulators 313
Bearing insulators 313
Bearings 160, 268, 293
Bearings, ball 218, 268
Bearings, ball miniature 293
Bearings, jewell 293
Bearings, needle 268, 293
Bearings, oiless 293
Bearings, rod end 196, 268, 293
Bearings, roller 268, 293
Bearings, roller taper 268, 293
Bearings, self aligning 268, 293
Bearings, special purpose 293
Bellow assemblies 160
Bellows 293
Bells & buzzers 402
Belts, dial drive 345, 366
Bench lathes 122
Benches & stools 251
Bending machines 238
Beryllium 105, 160, 294
Beryllium copper wire 264, 442
Bezels 345, 366
Bimetal, thermostatic 366
Binaural receivers 323, 427
Binaural tape recorders 429
Binders, liquid 106
Binding posts 320, 345, 366, 385, 402, 425
Bins 218
Black lights 420
Bladders, fuel 160, 218
Blades 160
Blades, compressor 160
Blades, hacksaw 218
Blades, stator 160
Blades, turbine 160
Blanks, crystal 224
Blast deflector, pads and tubes 162
Bleeder valves 207, 256
Blind fasteners 114, 175
Blisters 106
Blocks, terminal 336, 435
Blowers, motor & generator 162
Blowers, small 162
Blowers, transmitter 402
Blueprint machines 238
Boards, capacitor or resistor 403
Boards, electric panel 424
Boards, plotting 403
Boards, plug 366
Boards, terminal 336, 435
Bobbins, coil winding 403
Bobbins, transformer winding 403
Bolometer tubes 395,, 438
Bolt cartridges, explosive 218
Bolts, spade 268
Bolts, toggle or expansion 106, 149
Bonded plywood and metal 240
Bonding cable 220, 270
Bonding materials 106, 149
Bonding jumpers 235
Bonding resins 130
Booster amplifiers 343
Booster coils 297
Booster pumps 193
Boosters, gas pressure 162
Boosters, missile 189
Boosters, missile, liquid fueled 162
Boosters, missile, solid fueled 162
Boron 162
Boroncarbon resistors 329

. . . product cross index

Power supplies, AC, DC 242, 243
Power supplies, computer 243
Power supplies, emergency, mobile 243
Power supplies, 400 CPS 243
Power supplies, high voltage 244
Power supplies, klystron 244
Power supplies, lighting equipment 244
Power supplies, magnetic 244
Power supplies, microwave 244
Power supplies, radar 244
Power supplies, regulated 244
Power supplies, seals 245
Power supplies, transmitter 245
Power supplies, transistor 245
Power supplies, variable 245
Power supplies, voltage regulated 246
Power supply inverters 235
Power supply transformers, high voltage 436
Power transformers 254, 337, 394, 437
Power transistors 338, 438
Power units, rectifier 246
Precious metal plating 130, 155, 192
Precious metal tubing 143, 205
Precipitators, electrostatic 385
Precision approach radar 322
Precision attenuators 292, 402
Precision auto-transformer potentiometers 321
Precision capacitors 295, 406
Precision carbon film potentiometers 321
Precision castings, ferrous 106
Precision castings, non-ferrous 107
Precision drill presses 226
Precision gears 178, 230
Precision potentiometers 321, 385
Precision resistors 330, 433
Precision springs 139
Precision voltage dividing transformers 337, 394, 437
Preforms, record 426
Pre-selectors 426
Preset counters 370
Preset panels lighting equipment 236
Press forgings 116
Presses, drill 226
Presses, metal forming 246
Presses, punch 246
Pressure controls 170
Pressure flowmeters, differential 371
Pressure gauges 178, 372
Pressure gauges, air 372
Pressure gauges, differential 372
Pressure gauges, fuel 372
Pressure gauges, fuel systems & equipment 177
Pressure gauges, hydraulic 372
Pressure gauges, manifold 372
Pressure gauges, oil 372
Pressure gauges torque 372
Pressure indicators 350, 374
Pressure instruments 356, 385
Pressure measuring equipment 350
Pressure meters 354, 381
Pressure pickups 365, 385
Pressure potentiometers, absolute 385
Pressure potentiometers, differential 385
Pressure probes 386
Pressure recorders, electronic 387
Pressure regulating valves 210, 259
Pressure sensitive tapes 141, 203
Pressure switches 334
Pressure transducers 393
Pressure type capacitors 296, 406
Pressure warning units, fuel systems & equipment 177
Pressurization units 246
Pressurized connectors 167, 300
Pressurized & hermetic seals 198
Prime movers, ground power sources 242
Primer manifolds 187
Printed circuit amplifiers 290
Printed circuit capacitors 295, 406
Printed circuit coatings 297
Printed circuit coils 298
Printed circuit connectors 300
Printed circuit copper laminates 410
Printed circuit delay lines 302
Printed circuit, metal clad sheets 434
Printed circuit plugs 320
Printed circuit potentiometers 321, 385
Printed circuit resistors 330, 433
Printed circuit solder 331
Printed circuit soldering equipment 281
Printed circuits 322, 426
Printed, stamped etched circuits 297
Printed strip resistors 433
Prisms, mirrors, lenses 378
Probe indicators, RF 374
Probes 322, 426
Probes, crystal 322, 426
Probes, high fresquency 322, 426
Probes, high voltage 322, 426
Probes, measurement 322, 426
Probes, microwave 322, 426
Probes, pitot static 322
Probes, pressure 386
Probes, temperature 386
Processing computers, data 408
Processing equipment, motion picture 246
Program & line monitors 422
Projection lamps 236
Projection oscillographs 384, 424
Projection oscilloscopes, portable 424
Projection tubes 396, 440
Propellant cases, solid rocket 192
Propellant tanks 192
Propellants, liquid rocket 192
Propellants, solid rocket 192
Proportional counters 370
Propulsion systems 192
Protective coatings 110, 130, 150
Protective sealers 133, 198
Proximity indicators 374
Psychogalvanometers 386
Psychrometers 386
Public address systems 246
Pullers, tube 338, 395
Pulsation control 322
Pulsation dampers 172
Pulse electronic generators 180, 231
Pulse forming networks 422
Pulse generators 180, 231
Pulse jet engines 174, 192
Pulse modulators 422
Pulse oscillators 318, 423
Pulse sequence cameras 368
Pulse switches 334
Pulse time riser indicators 350, 374
Pulse transformers 337, 394, 437
Pump mechanical seals 199
Pump seals 134, 249
Pump system, fluid metering 176, 192
Pumps 192, 246, 280
Pumps, air 192
Pumps, alcohol 192
Pumps, booster 193
Pumps, combination air and hydraulic 193
Pumps, fuel 193
Pumps, fuel systems & equipment 177
Pumps, hydraulic, fixed displacement 193
Pumps, hydrogen peroxide 193
Pumps, liquid nitrogen 193, 280
Pumps, liquid oxygen 193, 280
Pumps, metering 193, 280
Pumps, oil 193
Pumps, oxygen transfer 280
Pumps, pneumatic 280
Pumps, speed density metering 193
Pumps, transfer 193, 281
Pumps, turbine 193, 281
Pumps, turbo 206
Pumps, vacuum 193, 206, 254, 281
Pumps, water injection 193, 281
Pumps, wobble 193, 281
Punch presses 246
Punches 246
Punchings & stampings, insulation parts 185
Pushbutton oscillators 318, 423
Pushbutton switches 334
Push-pull controls 301
Pyrometers 354, 381
Pyrometers, optical 356, 386
Pyrometers, radiation 356, 386
Pyrometers, resistance 356, 386

Q

Q comparators 408
Q electrical measuring meter instruments 313
Q meters 354, 381
Quantity gauges 178, 372
Quantity gauges, fuel 372
Quartz, fused 130, 155, 193
Quick disconnect couplings 224

R

R-F bridges 294, 403
R-F choke coils 298
R-F connectors 300
R-F converters 410
R-F filters 306, 415
R-F generators, electronics, signal 232
R-F interference equipment 235
R-F lenses 316
R-F mixing amplifiers 288, 363
R-F oscillators 318, 423
R-F output meters 354, 381
R-F permeaters 319, 425
R-F power electrical measuring meters instruments 313
R-F power meters 354, 382
R-F power monitors 422
R-F probe indicators 183, 374, 350
R-F relays 328, 431
R-F signal electronic generators 180
R-F transmitting coils 298
R-F wideband amplifiers 344, 364
R-F & I-F attenuators 292, 402
R-F-I-F distribution amplifiers 362
R-F & I-F transformers 337, 395, 438
Rack and panel connectors 300, 346, 369
Racks 246
Racks, aging, vacuum tube & transistor 246
Racks, cabinet 246
Racks, disc storage 246
Racks, equipment 246
Racks, mounting & relay 246
Radar, airborne 322
Radar analyzers 401
Radar antennas 402
Radar beacons 402, 426
Radar devices calibrators 346
Radar guidance systems 308
Radar oscillographs 384, 424
Radar & oscilloscope recording cameras 368, 404
Radar power supplies 244
Radar, precision approach 322
Radar & radio altimeters 399
Radar range calibrators 346
Radar receivers 324, 428
Radar reflectors 430
Radar, surveillance 322
Radar test sets 386
Radiation badges 149, 160
Radiation badges, nuclear 355, 383
Radiation counters 370
Radiation counters, nuclear 384
Radiation detectors 348, 371, 386
Radiation equipment, nuclear 384, 386
Radiation indicators 350, 374
Radiation indicators, nuclear 355, 374, 384
Radiation meters, nuclear 354,381
Radiation nuclear shielding 154, 191
Radiation pyrometers 356, 386
Radiation receivers 324, 428
Radiation shielding 135, 156, 199
Radiation test antennas 149, 160
Radiators 426
Radiators, coolant 193
Radiators, engine-cooling 193
Radiators, oil-cooling 193
Radio communication receivers 324, 428
Radio compasses 299
Radio compass indicators 323
Radio direction finders 323
Radio filters 306, 415
Radio frequency oscillators 318, 423
Radio guidance systems 308
Radio, hand powered emergency receivers 324
Radio and instrument gears 179,230
Radio meters, standing wave 382
Radio navigation receivers 324, 428
Radio noise filters 306, 415
Radio and radar altimters 286, 399
Radio range filters 228
Radio receivers, hand powered emergency 428
Radio remote controls 300
Radio shielding 136
Radio switches 334
Radio tower lighting filters 228
Radioactive chemicals 164
Radioactive stak 193
Radioactive stak, nuclear 240, 356
Radioactivity equipment 386
Radiosondes 323
Radomes 323
Ramjet engines 174, 193
Ramjet flameholders 176
Range finders 228
Rare gases 177, 228
Rate gyros 309, 323
Rate indicators, fuel flow 373
Rate meters 354, 382
Rate meters, counting 379
Rate meters, counting, nuclear 379
Rate-of-climb indicators 374
Rate-of-roll indicators 183
Rate-of-yaw indicators 183
Ratio controllers, fuel system & equipment 177
Ratio meters 354, 382
Ratiometers, electrical measuring instruments 311, 381, 419
Raw crystals 224
Reactor nuclear controls 170, 191
Reactors, saturable 193
Readout devices, computer 426
Receiver mechanical tuning devices 441
Receiver & transmitter panels 319
Receiver tuning capacitors 296, 406
Receivers 323, 426
Receivers, AM fixed frequency 323, 426
Receivers, AM FM communication 323, 426
Receivers, automatic radio alarm 323, 426
Receivers, binaural 323, 427
Receivers, communication and amateur 323, 427
Receivers, direction finding, navigation 323, 427
Receivers, distance measuring, navigation 323, 427
Receivers, diversity 323, 427
Receivers, diversity reception 427
Receivers, FM 323, 427
Receivers, FM multiplex 324, 427
Receivers, facsimile 323, 427
Receivers, fixed frequency 323, 427
Receivers, frequency shift 324, 427
Receivers, glide slope, navigation 324, 427
Receivers, infra-red, navigation 324, 427
Receivers, loran 324, 427
Receivers, microwave 324, 427
Receivers, mobile 324, 428
Receivers, omnirange 317
Receivers, panoramic 324, 428
Receivers, portable & mobile 324, 428
Receivers, radar 324, 428
Receivers, radiation 324, 428
Receivers, radio communication 324, 428
Receivers, radio, hand powered emergency 324, 428
Receivers, radio navigation 324, 428
Receivers, remote pickup, fixed 324, 428
Receivers, selective signaling, navigation 324, 428
Receivers, short wave fixed 324, 428
Receivers, short wave, portable 324, 428
Receivers, single side band 324, 428
Receivers, transistor operated 325, 428
Receivers, UHF 325, 428
Receivers, VHF 325, 428
Receivers, WWV 325, 429
Receiving equipment, VHF omnirange 325, 429
Receiving tubes 339, 396, 440
Record preforms 426
Recorders 386, 429
Recorders, airborne film 325, 429
Recorders, airborne magnetic 325, 429
Recorders, analog data 412
Recorders, antenna pattern 429
Recorders, binaural tape 429
Recorders, code 429

Recorders, comparators & PH meters 381
Recorders, data 429
Recorders, depth 386

Recording, control & indicating equipment, vacuum 396
Recording controls, audio 409
Recording drivers 371, 413
Recording engine indicators 183, 350, 374
Recording equipment, data 412
Recording instruments, graphic 378, 419
Recording meters 354, 382
Recording oscillographs 384, 424
Recording paper 425
Recording paper, facsimile 425
Recording tapes 435
Recording wire 146, 213
Rectifier checkers, crystal 368, 406
Rectifier inverters 235
Rectifier power units 246
Rectifiers 325, 430
Rectifiers, copper oxide 325
Rectifiers, electronic tube 325
Rectifiers, germanium 325
Rectifiers, mercury arc 325
Rectifiers, metallic oxide 325
Rectifiers, metallic, power supplies 325
Rectifiers, metallic stack 325
Rectifiers, metal sulphide 325
Rectifiers, selenium 325
Rectifiers, silicon 325
Rectifiers, titanium 325
Rectifiers, tube 325
Rectifiers, tube rectifying units 326
Rectifying gas filled type tubes 339
Rectifying, transmitting tubes 339, 440
Rectifying tubes 396
Rectifying tubes, gas filled type 440
Rectifying tubes, vacuum type 440
Rectifying, vacuum type tubes 339
Rectilinear potentiometers 321, 385
Rectilinear resistors 330, 433
Reducers & extensions shaft couplings 172
Reducers, shaft 193
Reduction gear assemblies 178
Reed meters, vibrating 382
Reels wire 146, 213
Reference or regulating tubes, voltage 396, 440
Refining equipment, crystal 224
Reflected & transmitted light scanners 434
Reflectors, radar 430
Refrigeration equipment, airborne 193
Refrigeration equipment, ground 247
Register controls 301
Register cutter controls 223
Regulated power supplies 244
Regulating or reference tubes, voltage 396, 440
Regulation controls, loop 409
Regulator controls, voltage 410
Regulators 194, 247, 430
Regulators, air 247
Regulators, air combustion 194
Regulators, air pressure 194, 247
Regulators, battery charging 326
Regulators, cable tension 247
Regulators, coolant 194
Regulators, demand oxygen 194
Regulators, electric frequency, AC generators 247
Regulators, electric frequency, inverters 247
Regulators, electric voltage, AC & DC generators 247
Regulators, electric voltage, inverters 247
Regulators, fluid flow 247
Regulators, frequency 326
Regulators, fuel flow 194
Regulators, fuel pressure 194
Regulators, generator 326
Regulators, hydraulic pressure 194, 248
Regulators, liquid level 194, 248
Regulators, manifold pressure 194
Regulators, oil cooler 194
Regulators, oil pressure 194
Regulators, oil pump flow 194
Regulators, oil temperature 195
Regulators, oxygen 195, 248
Regulators, temperature 195, 248
Regulators, vacuum systems 195
Regulators, voltage regulators and stabilizers 195
Regulators, water injection 195
Regulators, water metering 248
Reinforced plastic 130
Reinforced plastics, fiber glass 175
Relay bases 402
Relay rack panels 319
Relays 326, 430
Relays, audio operated 326
Relays, capacitance 326, 430
Relays, coaxial 326, 430
Relays, contact 326, 430
Relays, cross-bar 326, 430
Relays, D arsonval 326, 430
Relays, differential 326, 430
Relays, electronic, resistance activated 326, 430
Relays, frequency selective 326, 430
Relays, high voltage 326, 430
Relays, impulse 326, 430
Relays, keying and break-in 326, 430
Relays, latching 327, 430
Relays, mercury 327, 430
Relays, meter 327, 430
Relays, microwave 327, 430
Relays, overfrequency 327, 431
Relays, overload 327, 431
Relays, overvoltage & undervoltage 327, 431
Relays, photoelectric 327, 431
Relays, plate circuit 328, 431
Relays, polarized 328, 431
Relays, power 328, 431
Relays, reverse current 328, 431
Relays, RF 328, 431
Relays, rotary 328, 431
Relays, sensitive 328, 431
Relays, sequence 328, 431
Relays, stepping 328, 432
Relays, subminiature 328
Relays, synchronizing, transfer 326
Relays, telephone 329
Relays, temperature compensated 329, 432
Relays, thermal 329, 432
Relays, thermostatic delay 329, 432
Relays, time delay 327, 432
Relays, timing 327, 432
Relays, under frequency 327, 432
Relays, vacuum contact 327, 432
Relays, vibrating reed type 327, 432
Relief and by-pass valves 211, 259
Reliefs, strain 388
Release mechanisms 155
Remote, antenna controls 301
Remote camera controls 409
Remote control switches 334
Remote control systems 388
Remote indicators 350, 374
Remote pickup, audio 329, 432
Remote pickup receivers, fixed 324, 428
Remote sound controllers 223
Repeaters, microwave 329, 432
Repeaters, passive, microwave 329, 432
Reproduction, sound, equipment brushes 366
Reservoirs, hydraulic 182
Reservoirs, hydraulic systems 130, 195
Reservoirs, pneumatic systems 130, 195
Reset switches 334
Resins, bonding 130
Resins, encapsulating 130
Resins, potting 130
Resins, synthetic 131
Resistance activated relays, electronic 430
Resistance bridges 294, 403
Resistance comparators, automatic 346, 408
Resistance detectors 348, 371
Resistance & filament wire 264, 443
Resistance pyrometers 356, 386
Resistance soldering tools 252
Resistance standards 322, 388, 435
Resistance thermometer bulbs 329, 432
Resistance thermometers 392
Resistor or capacitor boards 403
Resistors 329, 432
Resistors, boroncarbon 329, 432
Resistors, carbon film 329, 432
Resistors, composition, variable 432
Resistors, decade 329, 432
Resistors, deposited carbon 329, 432
Resistors, encapsulated 329, 432
Resistors, film 329, 432
Resistors, fixed composition 432
Resistors, fixed wire-wound 329, 433
Resistors, fuse 329, 433

...STANDARDIZED
CRYOGENIC
PUMPS

*...for every
handling requirement!*

- **LIQUID** OXYGEN
- **LIQUID** NITROGEN
- **LIQUID** METHANE

NOW... 4 LINES OF PERFORMANCE-PROVED PROCESS PUMPS WITH NEW LO-TEMP MECHANICAL SEALS

...engineered for pumping liquids to

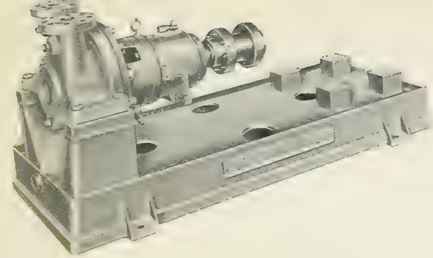
MINUS 320°F.

and below!

Now, with the development of a reliable and economical mechanical seal for low-temperature liquids, Byron Jackson offers four complete lines of standard cryogenic pumps.

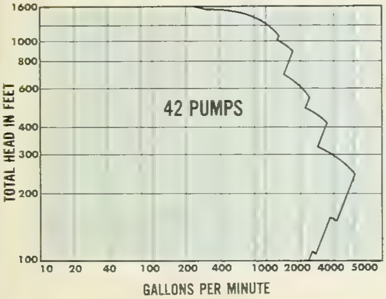
Each of these basic pump designs has certain characteristics which make it particularly suitable for a given installation. As a general rule, vertical models are the best answer to net positive suction head problems and usually require less floor space. Horizontal models are more economical and also offer certain advantages for mobile installations.

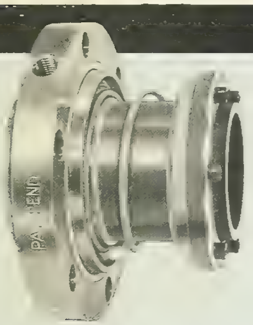
All have been proved through extensive service and can deliver under the most severe operating conditions . . . at temperatures to –320° F and below.



SM PROCESS PUMPS

A horizontal process pump with BJ's Lo-Temp mechanical seal. Built in one or two stages with discharge pressures up to 500 psi and capacities to 5000 gpm. This pump has its own bearing bracket and is coupled to a standard motor. The SM Pump is suitable for either mobile or permanent installation and can be dismantled quickly and easily without disturbing suction or discharge piping for inspection or service.



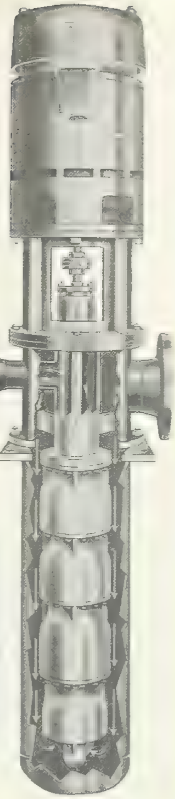


BJ DEVELOPS RELIABLE MECHANICAL SEAL AGAINST CRYOGENIC LIQUIDS

As a result of years of laboratory research and testing, Byron Jackson developed a reliable mechanical seal for cryogenic pump service that is as simple and easy to maintain as a standard industrial seal. The seal faces are replaceable . . . and all major components have a life expectancy that equals that of the pump. As an added safety feature, the seal has a built-in throttle bushing that will prevent hazardous leakage should a seal or bellows failure ever occur!

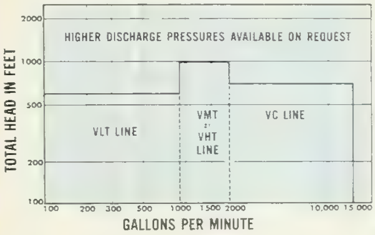
FEATURES OF THE BJ MECHANICAL SEAL . . .

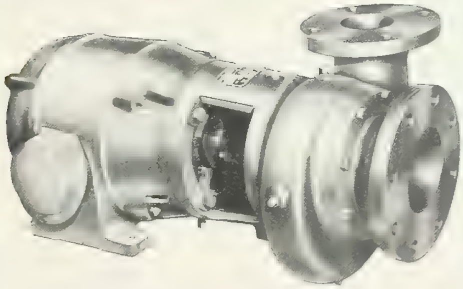
- Simple and easy to maintain
- Minimum leakage
- Long, trouble-free life
- Built-in throttle bushing for added safety
- Adaptable to many standard BJ Pump designs



VMT PUMPS

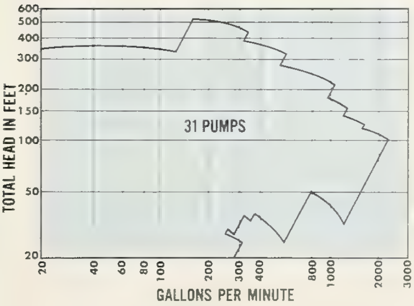
This vertical pump uses either the Lo-Temp mechanical seal or special BJ packing. When packing is used, the design utilizes a heat barrier converting (in the packing area) the cryogenic fluid to gas. Built in various numbers of stages, with capacities up to 15,000 gpm. Designed for moderate discharge pressures and where NPSH is a problem. VMT Pumps require the lowest suction pressures of any pump available.

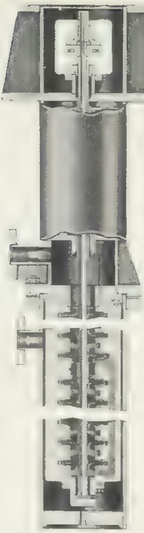




BILTON PUMPS

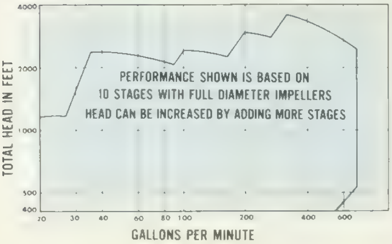
A self-contained horizontal motor-pump with Lo-Temp mechanical seal. Due to the close-coupled design and construction, Bilton Pumps are light and compact, require less space in mobile installations, are more economical, easier to maintain. Size is usually limited to 60 hp maximum.

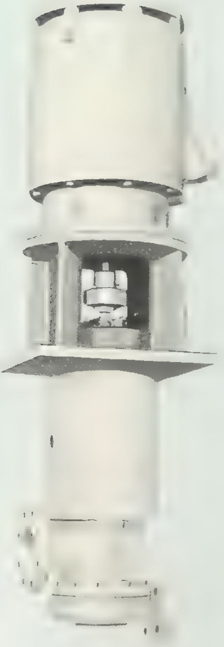




HYDROPRESS PUMPS

For extremely high pressures and efficiencies at low and moderate capacities, this vertical pump can be engineered with a minimum of four impellers and a maximum of 20 in series. Capacities are available to 650 gpm and pressures to 2000 psi. Available with Lo-Temp mechanical seal or heat barrier.





SPECIAL CRYOGENIC PUMPS

Pumping requirements for cryogenic fluids cannot always be met by the BJ standard line of Cryogenic Pumps due to chemical properties, toxicity, space limitations or other unusual conditions.

With such problems, Byron Jackson engineers will be glad to work with you to develop the pump for the job, and can place over three-quarters of a century of pump engineering knowledge at your disposal.

Thoroughly tested and qualified for CRYOGENIC service

Permanent Byron Jackson cryogenic pump test facility — used to improve the design of pumps and seals and to investigate the effect of suction pressure on pump cool down time.

Close-up of Mechanical Seal tester with cryogenic seal. This seal was developed to make standard BJ Process Pumps readily adaptable for pumping of low-temperature liquids.

Missile Trainer Simulators

Rheem Electronics has been engaged in the analysis, design, development, prototype manufacturing and production of missile and aircraft trainers and simulators since 1950. A wide range of technology has been developed in the electronic, optical and electro-mechanical field; servo systems/analog computer systems/closed circuit TV/radar and radar target simulation/flight platform simulation/optical projection systems/control and actuating mechanisms.

VANGUARD!

CONGRATULATIONS

Grand Central Rocket Co. congratulates the U. S. National Academy of Sciences, National Science Foundation, U. S. Naval Research Laboratory, The Martin Company, and all associated contractors and individuals who were affiliated with this outstanding contribution to the IGY program.

Because of demonstrated performance and reliability, one of Grand Central's solid propellant rocket engines was selected for the third stage of the VANGUARD vehicle, and was given the assignment of placing the satellite in orbit at a velocity of 18,000 mph. Grand Central Rocket Co. is honored to have played this prominent role in the VANGUARD project.
